

<<Complexity and real >>

图书基本信息

书名：<<Complexity and real computation 计算复杂性与实计算>>

13位ISBN编号：9780387982816

10位ISBN编号：0387982817

出版时间：1997-10

出版时间：Springer Verlag

作者：Blum, Lenore (EDT)/ Cucker, Felipe/ Shub, Michael/ Smale, Steve/ Blum, Lenore

页数：453

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<Complexity and real >>

内容概要

The classical theory of computation has its origins in the work of Goedel, Turing, Church, and Kleene and has been an extraordinarily successful framework for theoretical computer science. The thesis of this book, however, is that it provides an inadequate foundation for modern scientific computation where most of the algorithms are real number algorithms. The goal of this book is to develop a formal theory of computation which integrates major themes of the classical theory and which is more directly applicable to problems in mathematics, numerical analysis, and scientific computing. Along the way, the authors consider such fundamental problems as: * Is the Mandelbrot set decidable? * For simple quadratic maps, is the Julia set a halting set? * What is the real complexity of Newton's method? * Is there an algorithm for deciding the knapsack problem in a polynomial number of steps? * Is the Hilbert Nullstellensatz intractable? * Is the problem of locating a real zero of a degree four polynomial intractable? * Is linear programming tractable over the reals? The book is divided into three parts: The first part provides an extensive introduction and then proves the fundamental NP-completeness theorems of Cook-Karp and their extensions to more general number fields as the real and complex numbers. The later parts of the book develop a formal theory of computation which integrates major themes of the classical theory and which is more directly applicable to problems in mathematics, numerical analysis, and scientific computing.

<<Complexity and real >>

书籍目录

ForewordPreface Basic Development 1 Introduction 2 Definitions and First Properties of Computation 3
Computation over a Ring 4 Decision Problems and Complexity over a Ring 5 The Class NP and
NP-Complete Problems 6 Integer Machines 7 Algebraic Settings for the Problem "P = NP?" Appendix A
Some Geometry of Numerical Algorithms 8 Newton's Method 9 Fundamental Theorem of Algebra:
Complexity Aspects 10 Bezout's Theorem 11 Condition Numbers and the Loss of Precision of Linear
Equations 12 The Condition Number for Nonlinear Problems 13 The Condition Number in $P(H(d))$
14 Complexity and the Condition Number 15 Linear Programming Appendix B Complexity Classes
over the Reals 16 Deterministic Lower Bounds 17 Probabilistic Machines 18 Parallel Computations 19
Some Separations of Complexity Classes 20 Weak Machines 21 Additive Machines 22 Nonuniform
Complexity Classes 23 Descriptive ComplexityReferencesIndex
