<<Windows Vista安全>>

内容概要

- Written by two veteran Windows security experts, one a Microsoft Security MVP and Foundstone Security Consultant, and one a former senior member of Microsoft's Security Engineering Team. Collectively, Grimes and Johansson have 40 years of security experience, 30 on Windows
- This essential resource prepares end users and technical administrators to handle various security problems that still exist in Windows Vista and future threats
- Special in-depth coverage of all significant new security technologies in Windows Vista, including User Account Control, the new Firewall, Internet Explorer 7.0, Windows Defender, Service Hardening, and BitLocker
- Covers all significant changes to security in Windows Vista, including new group policy features and settings, how access control has changed, Internet Information Server 7, and more
- Valuable tools, documents, scripts, and other material will be available for download on the companion web site
