<<血液病一览 Haematology >>

内容概要

Haematology at a Glance presents the information required by medical students in the concise, easy to learn format of the at a Glance series. Starting with an explanation of normal blood cells and routine laboratory tests, the book takes the student on a whistle-stop tour of blood disorders, covering anaemias, leukaemias, lymphomas, coagulation disorders and blood transfusion. In response to the integrated medical courses, the book covers all aspects of basic sciences relevant to haematology. This book will be of interest to medical students following both traditional and integrated courses, and students of nursing and other health professions with an interest in haematology.
