<<内科学 Medicine>>

内容概要

Don't leave home without it - a sure-fire hit for virtually all of your medical science and general medical teaching.

Few things at university will last you from Freshers' Week to Finals.
but this book should !

It is hard to see how other medical textbooks will not be deficient compared to this one, with its numerous outstanding features - full colour photos and text, summary and "at a glance" boxes and coverage of all the medical sciences, clinical skills and clinical topics in a fully integrated fashion.

It's almost as if the pertinent parts of the standard pre-clinical texts have been cut and pasted into a book written by doctors, for doctors-to-be.

Medical students have had to wait a long time for this kind of book to come along , SHO - London.

<<内科学 Medicine>>
