<<分子光谱>>

内容概要

本书为中国科学院研究生教学丛书之一。

本书为化学工作者提供了最新的分子光谱理论与应用信息，内容覆盖了原子光谱、转动光谱、振动光谱及电子光谱，并特别讨论了凝聚相分子光谱。

本书从简要说明量子力学原理入手，系统介绍了光的性质、物质的电磁性质及电动力学等知识，结构安排合理，便于读者理解和掌握。

<<分子光谱>>

书籍目录

PREFACE

1 INTRODUCTION AND REVIEW

1.1 Historical Perspective

1.2 Definitions, Derivations, and Discovery

1.3 Review of Quantum Mechanics

1.4 Approximate Solutions to the Schrodinger Equation

1.5 Statistical Mechanics

1.6 Summary

1.7 Problems

BIBLIOGRAPHY

2 THE NATURE OF ELECTROMAGNETIC RADIATION

2.1 Introduction

2.2 The Classical Description of Electromagnetic Radiation

2.3 Propagation of Light in Matter

2.4 Quantum Mechanical Aspects of Light

2.5 Summary

2.6 Problems

BIBLIOGRAPHY

3 ELECTRIC AND MAGNETIC PROPERTIES OF MOLECULES AND BULK MATTER

3.1 Introduction

3.2 Electric Properties of Molecules

3.3 Electric Properties of Bulk Matter

3.4 Magnetic Properties of Matter

3.5 Summary

3.6 Problems

BIBLIOGRAPHY

4 TIME-DEPENDENT PERTURBATION THEORY OF SPECTROSCOPY

4.1 Introduction: Time Dependence in Quantum Mechanics

4.2 Time-Dependent Perturbation Theory

4.3 Rate Expression for Emission

4.4 Perturbation Theory Calculation of Polarizability

4.5 Quantum Mechanical Expression for Emission Rate

4.6 Time Dependence of the Density Matrix

4.7 Summary

4.8 Problems

BIBLIOGRAPHY

5 THE TIME-DEPENDENT APPROACH TO SPECTROSCOPY

5.1 Introduction

5.2 Time-Correlation

Functions and Spectra as Fourier Transform Pairs

5.3 Properties of Time-Correlation Functions and Spectral Lineshapes

5.4 The Fluctuation-Dissipation Theorem

5.5 Rotational Correlation Functions and Pure Rotational Spectra

5.6 Reorientational Spectroscopy of Liquids

5.7 Vibration-Rotation Spectra

<<分子光谱>>

5.8 Spectral Moments

5.9 Summary

5.10 Problems

BIBLIOGRAPHY

6 EXPERIMENTAL CONSIDERATIONS: ABSORPTION, EMISSION, AND SCATTERING

6.1 Introduction

6.2 Einstein A and B Coefficients for Absorption and Emission

6.3 Absorption and Stimulated Emission

6.4 Absorption and Emission Spectroscopy

6.5 Measurement of Light Scattering: The Raman and Rayleigh Effects

6.6 Spectral Lineshapes

6.7 Summary

6.8 Problems

BIBLIOGRAPHY

7 ATOMIC SPECTROSCOPY

7.1 Introduction

7.2 Good Quantum Numbers and Not So Good Quantum Numbers

7.3 Selection Rules for Atomic Absorption and Emission

7.4 The Effect of External Fields

7.5 Atomic Lasers and the Principles of Laser Emission

7.6 Summary

7.7 Problems

BIBLIOGRAPHY

8 ROTATIONAL SPECTROSCOPY

8.1 Introduction

8.2 Energy Levels of Free Rigid Rotors

8.3 Angular Momentum Coupling in Non- 1 Electronic States

8.4 Nuclear Statistics and J States of Homonuclear Diatomic

8.5 Rotational Absorption and Emission Spectroscopy

8.6 Rotational Raman Spectroscopy

8.7 Corrections to the Rigid-Rotor Approximation

8.8 Internal Rotation

8.9 Summary

8.10 Problems

BIBLIOGRAPHY

9 VIBRATIONAL SPECTROSCOPY OF DIATOMICS

9.1 Introduction

9.2 The Born-Oppenheimer Approximation and Its Consequences

9.3 The Harmonic Oscillator Model

9.4 Selection Rules for Vibrational Transitions

9.5 Beyond the Rigid Rotor-Harmonic Oscillator Approximation

9.6 Summary

9.7 Problems

BIBLIOGRAPHY

10 VIBRATIONAL SPECTROSCOPY OF POLYATOMIC MOLECULES

10.1 Introduction

10.2 Normal Modes of Vibration

<<分子光谱>>

- 10.3 Quantum Mechanics of Polyatomic Vibrations
- 10.4 Group Theoretical Treatment of Vibrations
- 10.5 Selection Rules for Infrared and Raman Scattering
- 10.6 Rotational Structure
- 10.7 Anharmonicity
- 10.8 Selection Rules at Work: Benzene
- 10.9 Solvent Effects on Infrared Spectra
- 10.10 Summary
- 10.11 Problems
- BIBLIOGRAPHY
- 11 ELECTRONIC SPECTROSCOPY
- 11.1 Introduction
- 11.2 Diatomic Molecules: Electronic States and Selection Rules
- 11.3 Vibrational Structure in Electronic Spectra of Diatomics
- 11.4 Born-Oppenheimer Breakdown in Diatomic Molecules
- 11.5 Polyatomic Molecules: Electronic States and Selection Rules
- 11.6 Transition Metal Complexes
- 11.7 Emission Spectroscopy of Polyatomic Molecules
- 11.8 Chromophores
- 11.9 Solvent Effects in Electronic Spectroscopy
- 11.10 Summary
- 11.11 Problems
- BIBLIOGRAPHY
- 12 RAMAN AND RESONANCE RAMAN SPECTROSCOPY
- 12.1 Introduction
- 12.2 Selection Rules in Raman Scattering
- 12.3 Polarization in Raman Scattering
- 12.4 Rotational and Vibrational Dynamics in Raman Scattering
- 12.5 Analysis of Raman Excitation Profiles
- 12.6 Time-Dependent Theory of Resonance Raman Spectra
- 12.7 Raman Scattering as a Third-Order Nonlinear Process
- 12.8 Summary
- 12.9 Problems
- BIBLIOGRAPHY
- A. MATH REVIEW
- A.1 Vectors and Tensors in Three Dimensions
- A.2 Matrices
- A.3 Operations with Cartesian and Spherical Tensors
- A.4 Spherical harmonics
- A.5 Wigner Rotation Functions and Spherical Tensors
- A.6 The Clebsch-Gordan Series and $3j$ Symbols
- BIBLIOGRAPHY
- B. PRINCIPLES OF ELECTROSTATICICS
- B.1 Units
- B.2 Some Applications of Gauss' Law
- B.3 Some Mathematical Details
- C. GROUP THEORY

<<分子光谱>>

C.1 Point Groups and Symmetry Operations
C.2 Information Conveyed by Character Tables
C.3 Direct Products and Reducible Representations
C.4 Character Tables
BIBLIOGRAPHY
SUBJECT INDEX
