

## <<分子生物学>>

### 图书基本信息

书名 : <<分子生物学>>

13位ISBN编号 : 9787030109590

10位ISBN编号 : 7030109597

出版时间 : 1999-3

出版时间 : 科学出版社

作者 : 特纳

页数 : 346

版权说明 : 本站所提供之下载的PDF图书仅提供预览和简介,请支持正版图书。

## <<分子生物学>>

### 内容概要

“精要速览系列(Instant Notes Series) ”是国外教材 “ Best Seller ”榜的上榜教材。该系列结构新颖，视角独特；重点明确，脉络分明；图表简明清晰；英文自然易懂，被国内多所重点院校选用作为双语教材。

先锋版是继“现代生物学精要速览”之后推出的跨学科的升级版本。

本书是该系列中的《分子生物学(第二版)》分册，全书共19章。

新版在原版的基础上内容进行了全面调整和扩充，增加了若干新专题，如中心法则、细胞周期和细胞凋亡等，书后并附有练习题。

本书是指导大学生快速掌握分子生物学基础知识的优秀教材，也是辅助教师授课的极佳教学参考书，同时可供生命科学相关专业的研究生参考。

## 书籍目录

Abbreviations  
Preface to the second edition  
Preface to the first edition  
Section A-Cells and macromolecules  
A1 Cellular classification  
A2 Subcellular organelles  
A3 Macromolecules  
A4 Large macromolecular assemblies  
Section B-Protein structure  
B1 Amino acids  
B2 Protein structure and function  
B3 Protein analysis  
Section C-Properties of nucleic acids  
C1 Nucleic acid structure  
C2 Chemical and physical properties of nucleic acids  
C3 Spectroscopic and thermal properties of nucleic acids  
C4 DNA supercoiling  
Section D-Prokaryotic and eukaryotic chromosome structure  
D1 Prokaryotic chromosome structure  
D2 Chromatin structure  
D3 Eukaryotic chromosome structure  
D4 Genome complexity  
D5 The flow of genetic information  
Section E-DNA replication  
E1 DNA replication: an overview  
E2 Bacterial DNA replication  
E3 The cell cycle  
E4 Eukaryotic DNA replication  
Section F-DNA damage, repair and recombination  
F1 Mutagenesis  
F2 DNA damage  
F3 DNA repair  
F4 Recombination  
Section G-Gene manipulation  
G1 DNA cloning: an overview  
G2 Preparation of plasmid DNA  
G3 Restriction enzymes and electrophoresis  
G4 Ligation, transformation and analysis of recombinants  
Section H-Cloning vectors  
H1 Design of plasmid vectors  
H2 Bacteriophage vectors  
H3 Cosmids, YACs and BACs  
H4 Eukaryotic vectors  
Section I-Gene libraries and screening  
I1 Genomic libraries  
I2 cDNA libraries  
I3 Screening procedures  
Section J-Analysis and uses of cloned DNA  
J1 Characterization of clones  
J2 Nucleic acid sequencing  
J3 Polymerase chain reaction  
J4 Organization of cloned genes  
J5 Mutagenesis of cloned genes  
J6 Applications of cloning  
Section K-Transcription in prokaryotes  
K1 Basic principles of transcription  
K2 Escherichia coli RNA polymerase  
K3 The E.coli promoter  
K4 Transcription, initiation, elongation and termination  
Section L-Regulation of transcription in prokaryotes  
L1 The lac operon  
L2 The trp operon  
L3 Transcriptional regulation by alternative factors  
Section M-Transcription in eukaryotes  
M1 The three RNA polymerases: characterization and function  
M2 RNA Pol genes: the ribosomal repeat  
M3 RNA Pol genes: 5S and tRNA transcription  
M4 RNA Pol genes: promoters and enhancers  
M5 General transcription factors and RNA Pol initiation  
Section N-Regulation of transcription in eukaryotes  
N1 Eukaryotic transcription factors  
N2 Examples of transcriptional regulation  
Section O-RNA processing and RNPs  
O1 rRNA processing and ribosomes  
O2 tRNA processing, RNase P and ribozymes  
O3 mRNA processing, hnRNPs and snRNPs  
O4 Alternative mRNA processing  
Section P-The genetic code and tRNAs  
P1 The genetic code  
P2 tRNA structure and function  
Section Q-Protein synthesis  
Q1 Aspects of protein synthesis  
Q2 Mechanism of protein synthesis  
Q3 Initiation in eukaryotes  
Q4 Translational control and post-translational events  
Section R-Bacteriophages and eukaryotic viruses  
R1 Introduction to viruses  
R2 Bacteriophages  
R3 DNA viruses  
R4 RNA viruses  
Section S-Tumor viruses and oncogenes  
S1 Oncogenes found in tumor viruses  
S2 Categories of oncogenes  
S3 Tumor suppressor genes  
S4 Apoptosis  
Further reading  
Multiple choice questions  
Answers
