

<<区域分解算法>>

图书基本信息

书名：<<区域分解算法>>

13位ISBN编号：9787030166906

10位ISBN编号：7030166906

出版时间：2006-1

出版时间：科学出版社

作者：托塞尔

页数：450

字数：551000

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<区域分解算法>>

内容概要

本书的目的是全面讲述偏微分方程中的各种最成功、最通用的区域分解方法，有限元逼近和谱元素逼近预条件算子，内容上做到白包含，而主要侧重点在于算法和数学方面。
本书详细阐述的一些重要的方法如FETI、平衡Neumann-Neumann方法、谱元素方法等，都是第一次在数学专著中出现。

书籍目录

1 Introduction 1.1 Basic Ideas of Domain Decomposition 1.2 Matrix and Vector Representations 1.3 Nonoverlapping Methods 1.4 The Schwarz Alternating Method 1.5 Block Jacobi Preconditioners 1.6 Some Results on Schwarz Alternating Methods2 Abstract Theory of Schwarz Methods 2.1 Introduction 2.2 Schwarz Methods 2.3 Convergence Theory 2.4 Historical Remarks 2.5 Additional Results 2.6 Remarks on the Implementation3 Two-Level Overlapping Methods 3.1 Introduction 3.2 Local Solvers 3.3 A Coarse Problem 3.4 Scaling and Quotient Space Arguments 3.5 Technical Tools 3.6 Convergence Results 3.7 Remarks on the Implementation 3.8 Numerical Results 3.9 Restricted Schwarz Algorithms 3.10 Alternative Coarse Problems4 Substructuring Methods: Introduction 4.1 Introduction 4.2 Problem Setting and Geometry 4.3 Schur Complement Systems 4.4 Discrete Harmonic Extensions 4.5 Condition Number of the Schur Complement 4.6 Technical Tools5 Primal Iterative Substructuring Methods 5.1 Introduction 5.2 Local Design and Analysis 5.3 Local Solvers 5.4 Coarse Spaces and Condition Number Estimates6 Neumann-Neumann and FETI Methods 6.1 Introduction 6.2 Balancing Neumann-Neumann Methods 6.3 One-Level FETI Methods 6.4 Dual-Primal FETI Methods7 Spectral Element Methods 7.1 Introduction 7.2 Deville-Mund Preconditioners 7.3 Two-Level Overlapping Schwarz Methods 7.4 Iterative Substructuring Methods 7.5 Remarks on p and hp Approximations8 Linear Elasticity 8.1 Introduction 8.2 A Two-Level Overlapping Method 8.3 Iterative Substructuring Methods 8.4 A Wire Basket Based Method 8.5 Neumann-Neumann and FETI Methods9 Preconditioners for Saddle Point Problems 9.1 Introduction 9.2 Block Preconditioners 9.3 Flows in Porous Media 9.4 The Stokes Problem and Almost Incompressible Elasticity10 Problems in $H(\text{div}; \cdot)$ and $H(\text{curl}; \cdot)$ 10.1 Overlapping Methods 10.2 Iterative Substructuring Methods11 Indefinite and Nonsymmetric Problems 11.1 Introduction 11.2 Algorithms on Overlapping Subregions 11.3 An Iterative Substructuring Method 11.4 Numerical Results 11.5 Additional TopicsA Elliptic Problems and Sobolev Spaces A.1 Sobolev Spaces A.2 Trace Spaces A.3 Linear Operators A.4 Poincare and Friedrichs Type Inequalities A.5 Spaces of Vector-Valued Functions A.6 Positive Definite Problems A.7 Non-Symmetric and Indefinite Problems A.8 Regularity ResultsB Galerkin Approximations B.1 Finite Element Approximations B.2 Spectral Element Approximations B.3 Divergence and Curl Conforming Finite Elements B.4 Saddle-Point Problems B.5 Inverse Inequalities B.6 Matrix Representation and Condition NumberC Solution of Algebraic Linear Systems C.1 Eigenvalues and Condition Number C.2 Direct Methods C.3 Richardson Method C.4 Steepest Descent C.5 Conjugate Gradient Method C.6 Methods for Non-Symmetric and Indefinite SystemsReferencesIndex
