<<中国英语学习者歧义词表征与加工研究>>

内容概要

Representation and Processing of English Lexical Ambiguity by Chinese EFL Learners (中国英语学习者歧义词表征与加工研究) 从词汇语义表征形成与发展的角度, 探讨了中国英语学习者在词汇表征建构的不同阶段、词汇多义不同纬度(三种歧义词)的通达特征。

研究发现, 中国英语学习者的歧义词表征是一个发展的模式: 同形歧义词和转喻多义词的心理表征随学习者英语水平的提高而更具分立性; 但在转喻多义这个维度上, 词义之间的联系强度不是随着语言水平的提高而减弱, 而是相反。

就不同歧义词的通达特征而言, 中国英语学习者通达三种歧义词的特点相同, 都遵循顺序通达模式。这充分体现了基于用法理论的语言学习观。

书籍目录

Contents前言AbstractChapter 1 Introduction1.1 Research Orientation1.2 Definition of Lexical Ambiguity1.3 Rationale for the Study1.4 Research QuestionsChapter 2 Previous Studies of Lexical Ambiguity Resolution:General Issues2.1 Introduction2.2 Meaning Representation2.2.1 Hierarchical Network Models2.2.2 Activation Spreading Models2.2.3 Distributed Memory Model2.3 Word Recognition and Lexical Access2.3.1 The Search Model2.3.2 The Logogen Model2.3.3 The Cohort Model2.3.4 Factors Influencing Lexical Access2.4 Semantic Priming2.5 Second Language Lexicon2.6 SummaryChapter 3 Previous Studies of Lexical Ambiguity Resolution:Theoretical Models and Empirical Evidence3.1 Introduction3.2 Previous Studies of Homonymy Processing in L13.2.1 Fodor's Modularity Hypothesis3.2.2 Five Models of Homonymy Processing in L13.3 Previous Studies of Suppression Mechanism in Homonymy Processing3.4 Previous Studies of Homonymy Processing in L23.5 Previous Studies of Polysemy Processing in L13.5.1 Representation of Polysemous Words3.5.2 Previous Studies of Polysemy Effects3.5.3 Processing of Polysemy in L13.6 Previous Studies of Polysemy Processing in L23.7 Comments on the Previous Studies of Lexical Ambiguity Resolution3.8 SummaryChapter 4 Previous Studies of Lexical Ambiguity Resolution:Experimental Tasks4.1 Introduction4.2 Experimental Techniques4.2.1 Ambiguity Detection Method4.2.2 Processing Complexity Tasks4.2.3 Priming Paradigm4.3 The Nature of Sentential Context4.4 The SOA Conditions4.5 Comments on the Experimental Tasks4.6 SummaryChapter 5 Research Questions and Hypotheses5.1 Introduction5.2 Linguistic and Psycholinguistic Models Related to the Present Study5.2.1 Ambiguous Words in Mind:Linguistic Models5.2.2 Disambiguation of Lexical Ambiguity:Psycholinguistic Models5.3 Research Questions5.4 Hypotheses5.5 Experimental Design and Predictions5.5.1 Experiment One5.5.2 Experiment Two5.5.3 Experiment Three5.6 SummaryChapter 6 Experiment One:Selecting Contextually Appropriate Meanings6.1 Introduction6.2 Preparatory Studies6.2.1 Preparatory Study I6.2.2 Preparatory Study II6.2.3 Preparatory Study III6.3 Experiment One6.3.1 Hypothesis,Design and Predictions6.3.2 Participants6.3.3 Materials6.3.4 Procedure6.3.5 Results6.3.6 Discussion6.4 SummaryChapter 7 Experiment Two:Suppressing Contextually Inappropriate Meanings7.1 Introduction7.2 Experiment Two7.2.1 Hypothesis,Design and Predictions7.2.2 Participants7.2.3 Material7.2.4 Procedure7.2.5 Results7.2.6 Discussion7.3 SummaryChapter 8 Experiment Three:Representation of English Lexical Ambiguity8.1 Introduction8.2 Experiment Three8.2.1 Hypothesis,Design and Predictions8.2.2 Participants8.2.3 Materials8.2.4 Procedure8.2.5 Results8.2.6 Discussion8.3 SummaryChapter 9 General Discussions9.1 Introduction9.2 Discussion of Lexical Ambiguity Resolution Theories9.2.1 L2 Processing of Homographs:The Ordered-Access Model9.2.2 L2 Processing of Metonymic Polysemy:Specified,Not Underspecified9.2.3 Comparison of the Processing of Different Ambiguous Words9.3 L2 Lexical Ambiguity Resolution and Reading Comprehension9.4 SummaryChapter 10 Conclusions10.1 Introduction10.2 Conclusions10.2.1 Conclusions about the Experiments10.2.2 A Unified Picture for L2 Resolution of Lexical Ambiguity10.3 Limitations and Suggestions for Future Studies10.3.1 Limitations10.3.2 Suggestions for Future Studies10.4 Implications10.4.1 Theoretical Implications10.4.2 Pedagogical Implications10.5 SummaryBibliographyAppendicesAppendix A:Ambiguous Words for JudgmentAppendix B:A Sample of Materials Used in Preparatory Study IIAppendix C:Domiance and Familiarity of the Ambiguous MeaningsAppendix D:Primes with Sentential Contexts and Their TargetsAppendix E:The Sense Relatedness QuestionnaireList of Tables3-1 Experimental Materials Used in Swinney(1979)3-2 Example Sentences Used in Frazier & Rayner(1990)3-3 Sample Sentences Used in Pickering & Frisson(2001)5-1 Kinds of Evidence Adduced by Croft5-2 Predictions of Experiment One5-3 Predictions of Interference Effects of Experiment Two6-1 Word Length and Frequency of Related and Unrelated Primes6-2 Tests of Word Length of Related and Unrelated Primes6-3 Tests of Frequency of Related and Unrelated Primes6-4 Participant Data in Terms of Age and Language Skills6-5 Results of One-Way ANOVA Tests of Participants'Data between 200 ms Group and 500 ms Group6-6 Results of One-Way ANOVA Test of Participants'Data between High and Low Proficiency Group6-7 Sample Materials for Experiment One6-8 Distribution of Participants and Experiment Trials6-9 Data Deleted due to Incorrect Response,Outliers and Unknown Meanings6-10 Mean RT(ms),SD(ms)and Errors by SOA,Subject

Group, Frequency, Ambiguity Type and Sentence Type
 6-11 Tests of Within-Subjects Effects (by participants)
 6-12 Tests of Between-Subjects Effects (by participants)
 6-13 Tests of Between-Subjects Effects (by items)
 6-14 Tests of Within-Subjects Effects (by items)
 6-15 The Results of Step-down Analysis of Relatedness by Dominance and Context (By participants)
 6-16 The Results of Step-down Analysis of Relatedness by Dominance and Context (By items)
 6-17 Priming Patterns across Proficiency Group and SOA Condition
 7-1 Participants' Data in Terms of Age and Language Skills
 7-2 Results of One-Way ANOVA Tests of Participants' Data between 200 ms and 500 ms
 7-3 Results of One Way ANOVA Tests of Participants' Data between High and Low Proficiency Group
 7-4 A Sample of Materials for Experiment Two
 7-5 Data Deleted Due to Outliers and Unknown Meanings
 7-6 Mean RTs (ms) to Related and Unrelated Targets across Proficiency, ISI, Ambiguity Type and Dominance
 7-7 Tests of Within-Subjects Effects (by participants)
 7-8 Tests of Between-Subjects Effects (by participants)
 7-9 Tests of Within-Subjects Effects (by item)
 7-10 Tests of Between-Subjects Effects (by item)
 7-11 Step-down Analysis of Relatedness for Homograph Targets (by participants)
 7-12 Step-down Analysis of Relatedness for Homograph Targets (by items)
 7-13 Step-Down Analysis of Relatedness for Metaphoric Polysem Targets (by participants)
 7-14 Step-down Analysis of Relatedness for Metaphoric Polysem Targets (by items)
 7-15 Step-down Analysis of Relatedness for Metonymic Polysem Targets (by participants)
 7-16 Step-down Analysis of Relatedness for Metonymic Polysem Targets (by items)
 7-17 Mean PC (percentage of correctness) and SD by ISI, Proficiency, Meaning Frequency and Sentence Type
 7-18 One-Sample Kolmogorov-Smirnov Test of Normality (by participants)
 7-19 One-Sample Kolmogorov-Smirnov Test of Normality (by items)
 7-20 Results of Wilcoxon Sign Ranks Test for the By-Participants Data
 7-21 Wilcoxon Sign Ranks Test or ANOVA Test for the By-Items Data
 7-22 Interference Patterns Obtained from RT and PC Analysis
 8-1 Mean Scores across Proficiency and Ambiguity Type
 8-2 Results of ANOVA Tests of Between-Subjects Effects
 8-3 Analysis of Variance of the Scores for the Low Proficiency Group
 8-4 Analysis of Variance of the Scores for the High Proficiency Group
 8-5 Post Hoc Tests for Data of Low Proficiency Group
 8-6 Post Hoc Tests for Data of High Proficiency Group
 8-7 Analysis of Variance of Scores for Homonymy between Low and High Proficiency Group
 8-8 Analysis of Variance of Scores for Metaphoric Polysemy between Low and High Proficiency Group
 8-9 Analysis of Variance of Scores for Metonymic Polysemy between Low and High Proficiency Group
 List of Figures
 1-1 Classification of Lexical Ambiguity
 2-1 Processing Modules in the Distributed Memory Model (Masson, 1995:5)
 2-2 Word Recognition in Forster's Search Model
 3-1 A Continuum of the Five Models
 5-1 Croft's Representation Model of Ambiguous Words
 5-2 Tuggy's Model of Polysemic Representation
 5-3 A Model of Homonymy and Polysemy Representation
 5-4 An Alternative Model of Ambiguous Representation
 5-5 A Developmental Model of Chinese EFL learners' Ambiguous Representation
 6-1 A Sample of E-Prime Program of Experiment One
 8-1 A Developmental Model of EFL Ambiguous Representation
 9-1 L2 Representation of Homonymy
 9-2 L2 Representation of Metonymic Polysemy
 9-3 A High-Quality Representation for the Word Gate (Cited from Perfetti & Hart, 2002:70)

章节摘录

A further consideration about the individual words in the context is that such words may directly prime a target, speeding up responses to it (Simpson & Krueger, 1991). According to this hypothesis, access is context insensitive, and in a priming paradigm, the ambiguous word will effectively prime the related targets regardless of context. One problem of this hypothesis is that lexical priming is short-lived, and unless the relevant word immediately precedes the ambiguity, it is most unlikely that it can exert an effect on the target (Neely, 1991). Furthermore, Tabossi's (1988) findings suggested that the selective effects after the constraining contexts were not produced by individual words associated with the dominant meaning of the ambiguity and corroborate the hypothesis of a genuine effect of context. In general, there are findings in the literature that suggest that the effect of context cannot be reduced to lexical phenomena. More recently, there arises a dispute on the effect of contextual strength between two currently developed models: the reordered access model and the context-sensitive model (Binder, 1999; Binder & Rayner, 1998; Kellas & Vu, 1999). According to both models, relative meaning frequency and contextual bias are important variables in the resolution of lexical ambiguity. Two important findings have emerged by the reordered access model. First, when readers encounter a balanced ambiguous word (a word with two equally frequent interpretations) in a neutral context, they look at that word longer than at a control word that is matched on length and frequency.

编辑推荐

《中国英语学习者歧义词表征与加工研究》目前的研究主要探讨母语的词汇歧义消解过程，二语习得者的词汇歧义消解过程还没有得到应有的重视；另外，按照理论语言学的解释，歧义词应该包括同形异义词（homograph）、同音异义词（homophone）和多义词（polysems）。

多义词有可分为隐喻性多义词和转喻性多义词。

目前的研究讨论了同形异义词和同音异义词的歧义消除，很少提及多义词的歧义消除。

当然这也是本书着重解决的问题。

《中国英语学习者歧义词表征与加工研究》从词汇语义表征形成与发展的角度，探讨了中国英语学习者在词汇表征建构的不同阶段、词汇多义不同纬度（三种歧义词）的通达特征。

它由十章组成。

除了第一章的“导言”和第十章的“结论”以外，其他八章为本书的主体。
