章节摘录

Para 1 Say youre working for Computer Chip Corporation, the worlds leading supplier of comput-er memory products. After the recent meltdown in the tech sector, your CEO is more determined than ever to crush the competition. So the big boss meets with the board of directors, and after a long, heated de-bate, they call you in to tell you they want to open CCCs cyberdoors in ( gulp !

) six weeks. That should be plenty of time, they insist. After all, the CEOs daughter ( a sophomore at Berkeley ) built her own on-line store in a mere three weeks, so shes selling enough Beanie Babies to put herself through college. "Surely we can sell our RAM computer memory chips for less ?

You know, direct to the customer ?

" the board chimes in unison. Para 2 Dont panic. Six weeks may sound a bit tight, but its still not a hellish 24-hour turnaround. With the right planning and a little luck, you just might make it. So calmly say, "Ill get right on it," and then immediately register the domain name ramforless, com with Network Solutions or another domain registry service. ( Actually, youll have to come up with your own name since ramforless.com has already been grabbed for the purposes of this tutorial. ) That done, take a deep breath and then read the rest of this tutorial in its entirety. By looking before leaping, youll learn about all the e-com-merce gotchas that can hit you unexpectedly. Planning ahead will not only save you quite a bit of redevelop-ment time down the road, it will also help you make educated decisions as you choose the right e-busi-ness solution for your company.
