书籍目录

Unit 1 Summer Experiences Unit 2 Life-long Learning Unit 3 Practice in Factories Unit 4 At the Doctors Unit 5
Keeping Fit Unit 6 New Job Unit 7 Communication Unit 8 First Day Unit 9 Achievement at Work Unit 10
Prospect Keys to Exercises

章节摘录

Rivers are one of our most important natural resources. Many of the world's great cities are located on rivers, and almost every country has at least one river flowing through it. Rivers play an important part in people's lives.

Since the beginning of history, people have used rivers for transportation. The longest one in the United States is the Mississippi. The lifeline of Egypt is the Nile. To the people of India, the Ganges is great, and it is also important for transportation. Ships can travel along it for a thousand miles. Other great rivers are the Congo in Africa and the Mekong in Southeast Asia. The greatest river of all for navigation, however, is the Amazon in Brazil. It is so wide and so deep that large ships can go about two thousand miles upon it. Rivers also provide food to eat, water to drink, and provide water for crops, and chances for fun and recreation for people who live along their banks. In order to provide more water for crops, engineers sometimes build a dam across a river to form a lake. Then people can use the water not only to irrigate their fields but also to make electricity. Large cities and factories located near rivers often cause problems. As the cities grow in size and factories increase in number, the water in the rivers becomes polluted with chemicals and other materials. People are learning the importance of doing more to keep their rivers clean if they want to enjoy the benefits of natural resources.
