章节摘录

(b) From proper noun to common noun. Words commonized from proper nouns have experienced the same semantic change. Many proper nouns , including person name , place name , book name and even trade mark become common nouns used in everyday life. A good example is the word newton , a unit of force now , from Sir. I. Newton , an English mathematician and natural philosopher. Another case is the word quixotic , meaning “ an impractical idealist ” now , coming from name of a figure in the novel Don Quixotic. (c) From concrete to abstract. With the development of language , some words denoting concrete meaning may be used in an abstract sense , thus enlarging the range of word meaning. For example the word pain used to mean “ a concrete punishment ” , now it refers to an abstract concept “ sufferings ” . (2) Narrowing of meaning , also called specialization , is the opposite of extension. It is a process by which a word of wide meaning acquires a narrower or specialized sense. In other words , a word that used to have a more general sense becomes restricted in its application and conveys a special meaning in present-day English. Deer is a typical example. In Shakespearean line “ rats and mice and such small deer ” , deer obviously designates “ animal ” in general. (3) Elevation refers to the process by which words rise from humble beginnings to positions of importance. Some words early in their history signified something quite low or humble , but changed as time went by to designate something agreeable or pleasant. Take a common term nice for example. Its original meaning was “ ignorant ” , then changed to “ foolish ” and now elevated to mean “ delightful , pleasant ” .
