章节摘录

In many countries , it is not unusual for families of different backgrounds to live together in shared space. How-ever , in the United States , this idea may still be considered odd. But this type of housing , called co-housing , is gaining popularity in the United States , too. Co-housing complexes are popping up across the country. For many people , this way of life is a relief to the busy modern lifestyle. A co-housing community (社区) has privately owned houses and shared land. There is often a "common house" with a kitchen and dining room , meeting room , and maybe a workshop or library or music room. About 25 co-housing communities have been built in recent years , and 150 more are planned. In co-housing complexes , everyone helps take care of children and elderly residents. Its also a place where residents shop , cook , and eat together. Residents of co-housing complexes like its sense of shared community. Children have other kids to play with , which many families like. Other residents like the feeling of living in a "village". Residents also say that they can live in co-housing for less money than they would pay for nearby apartments.
