

图书基本信息

书名：<<程序设计语言--设计与实现(第3版)>>

13位ISBN编号：9787302028338

10位ISBN编号：7302028338

出版时间：1998-05

出版时间：清华大学出版社

作者：普拉特(Ptatt,T.W.)

页数：654

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

## 内容概要

本书对用于开发现代程序设计语言的主要模式作了概述，着重讨论对现代程序设计极端重要的语言。作者在前两版基础上进行了全面修订以反映程序设计语言设计的新进展，本书通过使用C，C++和Smalltalk介绍过程型语言和面向对象型语言，通过LISP,Prolog和ML讨论各种程序设计模式，FORTRAN 90和Ada 95用了新标准，LISP和Pascal的内容作了更新。

书内对每种重要的程序设计语言都作了充分介绍，使读者不需要再购买单种语言的参考资料就可以解决所关心的问题，每章后的阅读建议使读者有可能扩大对重要问题的了解。

书籍目录

Part 1. Concepts

1 The Study of Programming Languages

1.1 Why Study Programming Languages?

1.2 A Short History of Programming Languages

1.2.1 Development of Early Languages

1.2.2 Role of Programming Languages

1.3 What Makes a Good Language?

1.3.1 Attributes of a Good Language

1.3.2 Application Domains

1.3.3 Language Standardization

1.4 Effects of Environments on Languages

1.4.1 Batch-Processing Environments

1.4.2 Interactive Environments

1.4.3 Embedded System Environments

1.4.4 Programming Environments

1.4.5 Environment Frameworks

1.5 Suggestions for Further Reading

1.6 Problems

2 Language Design Issues

2.1 The Structure and Operation of a Computer

2.1.1 The Hardware of the Computer

2.1.2 Firmware Computers

2.1.3 Translators and Software-Simulated Computers

2.2 Virtual Computers and Binding Times

2.2.1 Syntax and Semantics

2.2.2 Virtual Computers and Language Implementations

2.2.3 Hierarchies of Computers

2.2.4 Binding and Binding Time

2.3 Language Paradigms

2.4 Suggestions for Further Reading

2.5 Problems

3 Language Translation Issues

3.1 Programming Language Syntax

3.1.1 General Syntactic Criteria

3.1.2 Syntactic Elements of a Language

3.1.3 Overall Program-Subprogram Structure

3.2 Stages in Translation

3.2.1 Analysis of the Source Program

3.2.2 Synthesis of the Object Program

3.3 Formal Translation Models

3.3.1 BNF Grammars

3.3.2 Finite-State Automata

3.3.3 Pushdown Automata

3.3.4 Efficient Parsing Algorithms

3.3.5 Semantic Modeling

- 3.4 Suggestions for Further Reading
- 3.5 Problems
- 4 Data Types
  - 4.1 Properties of Types and Objects
    - 4.1.1 Data Objects, Variables, and Constants
    - 4.1.2 Data Types
    - 4.1.3 Specification of Elementary Data Types
    - 4.1.4 Implementation of Elementary Data Types
    - 4.1.5 Declarations
    - 4.1.6 Type Checking and Type Conversion
    - 4.1.7 Assignment and Initialization
  - 4.2 Elementary Data Types
    - 4.2.1 Numeric Data Types
    - 4.2.2 Enumerations
    - 4.2.3 Booleans
    - 4.2.4 Characters
    - 4.2.5 Internationalization
  - 4.3 Structured Data Types
    - 4.3.1 Structured Data Objects and Data Types
    - 4.3.2 Specification of Data Structure Types
    - 4.3.3 Implementation of Data Structure Types
    - 4.3.4 Declarations and Type Checking for Data Structures
    - 4.3.5 Vectors and Arrays
    - 4.3.6 Records
    - 4.3.7 Lists
    - 4.3.8 Character Strings
    - 4.3.9 Pointers and Programmer-Constructed Data Objects
    - 4.3.10 Sets
    - 4.3.11 Executable Data Objects
    - 4.3.12 Files and Input-Output
  - 4.4 Suggestions for Further Reading
  - 4.5 Problems
- 5 Abstraction 1: Encapsulation
  - 5.1 Abstract Data Types
    - 5.1.1 Evolution of the Data Type Concept
    - 5.1.2 Information Hiding
  - 5.2 Encapsulation by Subprograms
    - 5.2.1 Subprograms as Abstract Operations
    - 5.2.2 Subprogram Definition and Invocation
    - 5.2.3 Subprogram Definitions as Data Objects
  - 5.3 Type Definitions
    - 5.3.1 Type Equivalence
    - 5.3.2 Type Definitions with Parameters
  - 5.4 Storage Management
    - 5.4.1 Major Run-Time Elements Requiring Storage
    - 5.4.2 Programmer- and System-Controlled Storage Management
    - 5.4.3 Static Storage Management

- 5.4.4 Stack-Based Storage Management
- 5.4.5 Heap Storage Management: Fixed-Size Elements
- 5.4.6 Heap Storage Management: Variable-Size Elements
- 5.5 Suggestions for Further Reading
- 5.6 Problems
- 6 Sequence Control
  - 6.1 Implicit and Explicit Sequence Control
  - 6.2 Sequencing with Arithmetic Expressions
    - 6.2.1 Tree-Structure Representation
    - 6.2.2 Execution-Time Representation
  - 6.3 Sequencing with Nonarithmetic Expressions
    - 6.3.1 Pattern Matching
    - 6.3.2 Unification
    - 6.3.3 Backtracking
  - 6.4 Sequence Control Between Statements
    - 6.4.1 Basic Statements
    - 6.4.2 Structured Sequence Control
    - 6.4.3 Prime Programs
  - 6.5 Suggestions for Further Reading
  - 6.6 Problems
- 7 Subprogram Control
  - 7.1 Subprogram Sequence Control
    - 7.1.1 Simple Call-Return Subprograms
    - 7.1.2 Recursive Subprograms
  - 7.2 Attributes of Data Control
    - 7.2.1 Names and Referencing Environments
    - 7.2.2 Static and Dynamic Scope
    - 7.2.3 Block Structure
    - 7.2.4 Local Data and Local Referencing Environments
  - 7.3 Shared Data in Subprograms
    - 7.3.1 Parameters and Parameter Transmission
    - 7.3.2 Explicit Common Environments
    - 7.3.3 Dynamic Scope
    - 7.3.4 Static Scope and Block Structure
  - 7.4 Suggestions for Further Reading
  - 7.5 Problems
- 8 Abstraction 11: Inheritance
  - 8.1 Abstract Data Types Revisited
  - 8.2 Inheritance
    - 8.2.1 Derived Classes
    - 8.2.2 Methods
    - 8.2.3 Abstract Classes
    - 8.2.4 Objects and Messages
    - 8.2.5 Abstraction Concepts
  - 8.3 Polymorphism
  - 8.4 Suggestions for Further Reading
  - 8.5 Problems

- 9 Advances in Language Design
  - 9.1 Variations on Subprogram Control
    - 9.1.1 Exceptions and Exception Handlers
    - 9.1.2 Coroutines
    - 9.1.3 Scheduled Subprograms
    - 9.1.4 Nonsequential Execution
  - 9.2 Parallel Programming
    - 9.2.1 Concurrent Execution
    - 9.2.2 Guarded Commands
    - 9.2.3 Tasks
    - 9.2.4 Synchronization of Tasks
  - 9.3 Formal Properties of Languages
    - 9.3.1 Chomsky Hierarchy
    - 9.3.2 Undecidability
    - 9.3.3 Algorithm Complexity
  - 9.4 Language Semantics
    - 9.4.1 Denotational Semantics
    - 9.4.2 Program Verification
    - 9.4.3 Algebraic Data Types
    - 9.4.4 Resolution
  - 9.5 Hardware Developments
    - 9.5.1 Processor Design
    - 9.5.2 System Design
  - 9.6 Software Architecture
    - 9.6.1 Persistent Data and Transaction Systems
    - 9.6.2 Networks and Client/Server Computing
    - 9.6.3 Desktop Publishing
    - 9.6.4 Programming Language Trends
  - 9.7 Suggestions for Further Reading
  - 9.8 Problems
- Part 11. Paradigms and Languages
- 10 Simple Procedural Languages
  - 10.1 FORTRAN
    - 10.1.1 History
    - 10.1.2 Hello World
    - 10.1.3 Brief Overview of the Language
    - 10.1.4 Data Objects
    - 10.1.5 Sequence Control
    - 10.1.6 Subprograms and Storage Management
    - 10.1.7 Abstraction and Encapsulation
    - 10.1.8 Language Evaluation
  - 10.2 C
    - 10.2.1 History
    - 10.2.2 Hello World
    - 10.2.3 Brief Overview of the Language
    - 10.2.4 Data Objects
    - 10.2.5 Sequence Control

- 10.2.6 Subprograms and Storage Management
- 10.2.7 Abstraction and Encapsulation
- 10.2.8 Language Evaluation
- 10.3 Suggestions for Further Reading
- 10.4 Problems
- 11 Block-Structured Procedural Languages
  - 11.1 Pascal
    - 11.1.1 History
    - 11.1.2 Hello World
    - 11.1.3 Brief Overview of the Language
    - 11.1.4 Data Objects
    - 11.1.5 Sequence Control
    - 11.1.6 Subprograms and Storage Management
    - 11.1.7 Abstraction and Encapsulation
    - 11.1.8 Language Evaluation
  - 11.2 Suggestions for Further Reading
  - 11.3 Problems
- 12 Object-Based Languages
  - 12.1 Ada
    - 12.1.1 History
    - 12.1.2 Hello World
    - 12.1.3 Brief Overview of the Language
    - 12.1.4 Data Objects
    - 12.1.5 Sequence Control
    - 12.1.6 Subprograms and Storage Management
    - 12.1.7 Abstraction and Encapsulation
    - 12.1.8 Language Evaluation
  - 12.2 C++
    - 12.2.1 History
    - 12.2.2 Hello World
    - 12.2.3 Brief Overview of the Language
    - 12.2.4 Data Objects
    - 12.2.5 Sequence Control
    - 12.2.6 Subprograms and Storage Management
    - 12.2.7 Abstraction and Encapsulation
    - 12.2.8 Language Evaluation
  - 12.3 Smalltalk
    - 12.3.1 History
    - 12.3.2 HelloWorld
    - 12.3.3 Brief Overview of the Language
    - 12.3.4 Data Objects
    - 12.3.5 Sequence Control
    - 12.3.6 Subprograms and Storage Management
    - 12.3.7 Abstraction and Encapsulation
    - 12.3.8 Language Evaluation
  - 12.4 Suggestions for Further Reading
  - 12.5 Problems

13 Functional Languages

13.1 LISP

13.1.1 History

13.1.2 HelloWorld

13.1.3 Brief Overview of the Language

13.1.4 Data Objects

13.1.5 Sequence Control

13.1.6 Subprograms and Storage Management

13.1.7 Abstraction and Encapsulation

13.1.8 Language Evaluation

13.2 ML

13.2.1 History

13.2.2 HelloWorld

13.2.3 Brief Overview of the Language

13.2.4 Data Objects

13.2.5 Sequence Control

13.2.6 Subprograms and Storage Management

13.2.7 Abstraction and Encapsulation

13.2.8 Language Evaluation

13.3 Suggestions for Further Reading

13.4 Problems

14 Logic Programming Languages

14.1 Prolog

14.1.1 History

14.1.2 HelloWorld

14.1.3 Brief Overview of the Language

14.1.4 Data Objects

14.1.5 Sequence Control

14.1.6 Subprograms and Storage Management

14.1.7 Abstraction and Encapsulation

14.1.8 Language Evaluation

14.2 Suggestions for Further Reading

14.3 Problems
