

<<Java面向对象程序设计>>

图书基本信息

书名：<<Java面向对象程序设计>>

13位ISBN编号：9787302097662

10位ISBN编号：7302097666

出版时间：2004-10

出版时间：清华大学出版社

作者：（美）阿诺（Arnow,D.M.），（美）德克斯特（Dexter,S.），（美）卫斯（Weiss,G.）等著

页数：680

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<Java面向对象程序设计>>

内容概要

本书是由在大学任教的教授写给选修编程课程学生的基础教材，并不要求学生具备编程背景。

本书从第一章开始就引入了对象、类、消息等基本概念，自始至终从面向对象的角度使读者建立起编程的坚实基础。

本书将重点放在软件开发过程的讲解，注重实用性与可操作性。

“图形用户界面(GUI)设计实例”和“Java应用技巧”两个部分贯穿全书每一章，以加强读者对核心概念的理解。

本书重点介绍了Java语言及其类库，以及大量编程技巧和算法，使读者能够通过学习本教材具备用软件解决实际问题的能力。

本书内容丰富，范例程序详实，适合作为Java程序设计的学习用书。

<<Java面向对象程序设计>>

作者简介

作者：(美国)阿诺(Arnold David M.) (美国)德克斯特 (Dexter Scott) (美国)卫斯 (Weiss Gerald)

书籍目录

CHAPTER 1 Jumping into Java 1.1 Computers and Programs 1.2 Programs and Models 1.3 Objects, Classes, and Messages 1.4 Our First Object: A PrintStream 1.5 Sending a Message to the System out Object 1.6 A Java Program 1.7 Mechanics 1.8 Time Summary Key Terms Questions for Review Exercises Introduction: Web Pages, HTML, and Applets

CHAPTER 2 Sending Messages and Performing Operations 2.1 Introduction 2.2 Using PrintStream Objects References, Methods, and Messages 2.3 The String Class 2.4 Methods, Arguments, and Return Values 2.5 Reference Variables Variables and Assignment 2.6 Imperative Programming: Doing the Work 2.7 Using String Methods 2.8 Imperative Programming: Simple Conditionals Summary Key Terms Questions for Review Exercises Painting and Positioning Graphics

CHAPTER 3 Working with Objects and Primitive Types 3.1 Introduction 3.2 Creating Objects Origins of Objects 3.3 Imperative Programming: The boolean Type 3.4 Working with Objects 3.5 Dates and Calendars 3.6 Imperative Programming: Other Integer Types 3.7 BigInteger Packages and the import Statement 3.8 Introduction to Input 3.9 The File Input Process 3.10 Keyboard Input 3.11 File Output 3.12 Network Computing: An Introduction Java Documentation Summary Key Terms Questions for Review Exercises Toward Animation

CHAPTER 4 Defining Classes 4.1 Introduction 4.2 Class Definition: Methods 4.3 Class Definition: Instance Variables 4.4 More on Methods: Return Values 4.5 Imperative Programming: Finding the Minimum Variables, Declarations, and the return Statement 4.6 Still More on Methods: Parameters 4.7 State and Behavior 4.8 Class Definition: Putting It All Together Declarations, Access, and Objects Summary Key Terms Questions for Review Exercises A Simple Animation

CHAPTER 5 Advanced Class Definition 5.1 Customizing New Objects: Constructors Constructors, Initializers, and Overloading 5.2 Example: A Name Class 5.3 Providing Class Behaviors Static Methods 5.4 Tracking Class-Wide Information: Static Variables 5.5 Defining Constant Values: final Working with Objects 5.6 Input Methods Revisited: Testing for End of Input Summary Key Terms Questions for Review Exercises Creating Controls and Interaction

CHAPTER 6 Inside the Method: Imperative Programming 6.1 Introduction 6.2 A Metric Conversion Class float, double, and the for Statement 6.3 Approximating the Value of 6.4 Cascaded and Compound Conditional Statements Logical Operators and Conditional Statements Summary Key Terms Questions for Review Exercises More on Interaction

CHAPTER 7 Designing Classes 7.1 Introduction 7.2 Designing Classes—An Overview 7.3 The Counter Class Revisited 7.4 An Automated Teller Machine 7.5 Dispatching Repairpeople: An Example Summary Key Terms Questions for Review Exercises Multiple Controls: Layout and Event Handling

CHAPTER 8 Verifying Object Behavior 8.1 Introduction 8.2 Categories of Errors Java's Assertion Facility 8.3 Test Drivers 8.4 Automatic Testing 8.5 What to Test and How to Test It 8.6 Debugging Techniques Summary Key Terms Questions for Review Exercises Separating Display and Control

CHAPTER 9 Working with Multiple Objects 9.1 Introduction 9.2 Processing Multiple Objects 9.3 Loop Patterns 9.4 The Impact of Loops on Testing 9.5 A Telephone Book 9.6 Maintaining Multiple Values 9.7 Vector—A Simple Collection Class 9.8 Traversing Vectors Using for Loops 9.9 Revisiting the TelephoneBook Class Primitive Types and Collections: Revisiting the Wrapper Classes 9.10 An Example—Determining a Student's Relative Performance 9.11 Another Vector Application object Methods 9.12 Introducing Arrays 9.13 Vectors and Arrays 9.14 Coin Flipping with Arrays Summary Key Terms Questions for Review Exercises Positioning Text

CHAPTER 10 Designing Iteration 10.1 Introduction 10.2 Designing Loops Two Loop Statements 10.3 Another Simple Example 10.4 Revisiting Loop Patterns 10.5 Variations on the Repairperson Loop 10.6 Totaling a Bank's Accounts 10.7 More Loop Patterns: Counters, Accumulators, and Extremes 10.8 Iterating Through Arrays Short Circuits, break, and continue 10.9 A Loop Design Strategy: Refining an Imperfect Solution 10.10 Example: The LOGO Turtle Summary Key Terms Questions for Review Exercises More Text Manipulation

CHAPTER 11 Maintaining Collections of Objects 11.1 Overview 11.2 Searching 11.3 Binary Search 11.4 Finding the Index of an Extreme 11.5 Sorting 11.6 Searching Files 11.7 Threads: Computing in Parallel 11.8 Threads: A

<<Java面向对象程序设计>>

Parallel File Search Summary Key Terms Questions for Review Exercises ThreadsCHAPTER 12
Extending Class Behavior 12.1 Introduction 12.2 Extending Classes-Inheritance I 12.3 A Better
BufferedReader 12.4 Adding State to the Subclass-Accessing the Superclass's State 12.5 Revisiting the Name
Class-Adding Additional State Inheritance 12.6 Overriding Methods Polymorphism 12.7 Factoring Out
Common Behavior-Inheritance II 12.8 Abstract Methods and Classes 12.9 Specifying Common
Behavior-Interfaces 12.10 A Generic Sorting Method Summary Key Terms Questions for Review
Exercises Exploring the Abstract Window Toolkit of the Java Class HierarchyCHAPTER 13 Exceptions 13.1
Expect the Unexpected 13.2 Encountering the Unexpected The Exception Class 13.3 Handling the
Unexpected 13.4 Responsibility for the Unexpected 13.5 Exceptions Are Not Always Errors Summary Key
Terms Questions for Review Exercises The Model-View-Controller(MVC)ParadigmCHAPTER 14
Recursion 14.1 Introduction 14.2 Example:Exponentiation 14.3 How to Design a Recursive Method 14.4
Recursive Methods:Under the Hood 14.5 Recursion with Vectors,Arrays,and Strings 14.6 Permutations 14.7
Towers of Hanoi 14.8 Recursion and Iteration Summary Key Terms Questions for Review Exercises
Towers of Hanoi AppletCHAPTER 15 Client-Server Computing 15.1 Clients and Servers 15.2 Internet
Communication 15.3 Client-Server Computing 15.4 Some Simple Client Classes Summary Key Terms
Questions for Review Exercises Swing APPENDIX A GlossaryAPPENDIX B Three Java
EnvironmentsAPPENDIX C AWIOAPPENDIX D Traversing Collections Using Enumerations
