IV. Reading Comprehension Read the following passage and choose the best answer. Niagara Falls (waterfall) is located on the Niagara River in western New York and sooth eastern Ontario. It was formed about 12 000 years ago. Niagara Falls consists of the Horseshoe or Canadian Falls and the American Falls. The Ameriean Falls are separated by Goat Island, New York. A small section Of the American Falls near Goat Island is al so known as Bridalveil Falls. The Niagaras large volume of flow, averaging about 5 520 cubic metres per second, plus its steep drop, give the river great power potential. Horseshoe Falls carries a bout nine times more water than the U.S. Falls. In 1958, the Canadians built a power station at Queenston, Ontario. And the Americans built one in 1963, on the United States side. Niagara Falls is a great tourist attraction, at tracting millions of visitors each year. The falls may be viewed from parks loeated on either side of the river, from observation towers, from boats, from Goat Island. Visitors also may enter the Cave of the Winds, located behind a curtain of falling water near the base of the American Falls.
