## 章节摘录

book is aiming to help you develop the negotiation skill , The first thing for negotia-tion is price-haggling. Even before you start this course , you surely have had someexperience in price-haggling on various occasions. And then the following part of thecourse will be much easier for you for certain.Haggling Is a Strategy.

Haggling is an evolving marketplace skill. In practice , it goes back centuries , to times when the vendor-cart and booths were the only sources of market trading activityand goods exchange. Today , we find that bargain hunting and sale shopping are viableadventures for discounts at retail stores; however , garage sales , auctions , flea markets , and booth sales are prime opportunities to learn the art of haggling. Haggling is often as-sociated with bantering , price debates , and auction-style environments. The ( often ) un-comfortable , face-to-face negotiations of pricing quickly become competitive , thrillng , and at times , risky. The lure of "the best bargain" is enticing with its accompanyinghaggling process; the strategy of haggling really is based on simple bargaining roundtablestrategies. Understanding the key components of haggling can help you build a strong set ofskills for your bargaining efforts. When you can accurately gauge the sellers "hunger , "you can gain a significant advantage. Haggling requires understanding your own motive;without your baseline , or "set point" price in mind for a particular product , youll quick-ly fall into the trap of being out-priced , or losing the item to a price you may not havehad to pay for. Buyers remorse is the worst felt when you know you could have gotten abetter price if you had just been patient , or taken different steps in your ~tL- , ~gy. Thewinning streaks will come with time , but you can best prepare by following these simplesteps to a valuable haggling strategy : Learn to bid VERY low : This is a technique that will surprise you more often than not. If you bid extremely low in some cases , the sellers may completely re-consider their first offer. Sometimes this makes them even stop and reflect; maybe theyve priced too high , and are unaware of the true value; maybe theyve overlooked something. Whatever the case may be , you can start out by completely undercutting the initial offer , giving you the chance to gauge the sale with better accuracy. Play the inspector : Make sure to touch , feel , and account for any flaws or legitimate defects on the product. This will provide you a chance for leverage so you can secure a lower price easily.
