

<<杂环化学>>

图书基本信息

书名：<<杂环化学>>

13位ISBN编号：9787506233989

10位ISBN编号：7506233983

出版时间：1997-9

出版时间：世界图书出版公司

作者：Thomas L.Gilchrist 著

页数：414

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

内容概要

The material of the second edition has been revised with two principal aims in mind. The first is to bring the contents up to date. To this end, Chapter 1 and several parts of other chapters have been rewritten, the references have been updated (with more emphasis given to recent review articles) and several new reaction schemes have been introduced. These new schemes are intended to illustrate aspects of heterocyclic chemistry that are becoming more important. Organopalladium and other organometallic species are increasingly used in ring synthesis and in substitution reactions; some of the new schemes provide examples. New applications of heterocyclic compounds as pharmaceuticals, as intermediates in organic synthesis and as ligands are also illustrated.

书籍目录

Preface to the third edition. Preface to the second edition. Preface to the first edition. Acknowledgements

1 Introduction: uses of heterocyclic compounds

2 Aromatic heterocycles

2.1 The common structural types

2.1.1 Six-atom, six- π -electron heterocycles

2.1.2 Five-atom, six- π -electron heterocycles

2.1.3 Benzo-fused ring systems

2.1.4 Other fused heterocycles

2.2 Some criteria of aromaticity in heterocycles

2.2.1 Bond lengths

2.2.2 Ring current effects and chemical shifts in ^1H NMR spectra

2.2.3 Molecular orbitals and delocalization energy

2.2.4 Resonance energies

2.2.5 Dewar resonance energies and other calculated resonance energies

2.2.6 General conclusions

2.3 Aromatic character and other types of unsaturated heterocycles

2.3.1 Monocyclic systems that conform to the Huckel rule

2.3.2 Other unsaturated heterocycles

2.4 Reactivity of heteroaromatic compounds

2.5 Tautomerism of heteroaromatic compounds

Summary

Problems

3 Nonaromatic heterocycles

3.1 Introduction

3.2 Bond angle strain

3.2.1 Angle strain and bonding in small-ring heterocycles

3.2.2 Some consequences of bond angle strain in small rings

3.2.3 Angle strain in larger rings

3.3 Torsional energy barriers

3.3.1 Single bonds

3.3.2 Double bonds and partial double bonds

3.4 Influence of bond lengths and van der Waals radii: conformational preferences of flexible heterocycles

3.4.1 Saturated six-membered heterocycles

3.4.2 Four- and five-membered heterocycles

3.5 Other types of interaction in saturated heterocycles

3.5.1 'Through-bond' orbital interactions: the anomeric effect

3.5.2 Attractive 'through-space' interactions

Summary

Problems

4 Ring synthesis

4.1 Introduction

4.2 Cyclization reactions

4.2.1 Reaction types

4.2.2 Displacement at saturated carbon

4.2.3 Intramolecular nucleophilic addition to carbonyl groups

4.2.4 Intramolecular addition of nucleophiles to other double bonds

4.2.5 Cyclization on to triple bonds

4.2.6 Radical cyclization

4.2.7 Carbene and nitrene cyclization

4.2.8 Electrocyclic reactions

4.3 Cycloaddition reactions

4.3.1 Reaction types

4.3.2 1,3-Dipolar cycloaddition

4.3.3 Hetero-Diels Alder reactions

4.3.4 [2 + 2] Cycloaddition

4.3.5 Cheletropic reactions

4.3.6 Ene reactions

Summary

Problems

5 Six-membered ring compounds with one heteroatom

6 Five-membered ring compounds with one heteroatom

7 Six-membered ring compounds with two or more heteroatoms

8 Five-membered ring compounds with two or more heteroatoms

9 Three- and four-membered ring compounds

10 Seven-membered ring compounds

11 Nomenclature

Answers and references to selected problems
