

<<经济数学和金融数学>>

图书基本信息

书名：<<经济数学和金融数学>>

13位ISBN编号：9787506239233

10位ISBN编号：750623923X

出版时间：1998-08

出版时间：世界图书出版公司

作者：M.Anthony

页数：394

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<经济数学和金融数学>>

内容概要

This book is an introduction to calculus and linear algebra for students of disciplines such as economics, finance, business, management, and accounting. It is intended for readers who may have already encountered some differential calculus, and it will also be appropriate for those with less experience, possibly used in conjunction with one of the many more elementary texts on basic mathematics.

书籍目录

1. Mathematical models in economics 1.1 Introduction 1.2 A model of the market 1.3 Market equilibrium 1.4 Excise tax 1.5 Comments Worked examples Main topics/Key terms, notations and formulae Exercises2. Mathematical terms and notations 2.1 Sets 2.2 Functions 2.3 Composite functions 2.4 Graphs and equations Worked examples Main topics/Key terms, notations and formulae Exercises3. Sequences, recurrences, limits 3.1 Sequences 3.2 The first-order recurrence 3.3 Limits 3.4 Special cases Worked examples Main topics/Key terms, notations and formulae Exercises4. The elements of finance 4.1 Interest and capital growth 4.2 Income generation 4.3 The interval of compounding Worked examples Main topics/Key terms, notations and formulae Exercises5. The cobweb model 5.1 How stable is market equilibrium 5.2 An example 5.3 The general linear case 5.4 Economic interpretation Worked examples Main topics/Key terms, notations and formulae Exercises6. Introduction to calculus 6.1 The rate of change of a function 6.2 Rules for finding the derivative 6.3 Marginal cost as a derivative 6.4 The derivative of a composite function 6.5 The derivative of an inverse function Worked examples Main topics/Key terms, notations and formulae Exercises7. Some special functions 7.1 Powers 7.2 The exponential function and its properties 7.3 Continuous compounding of interest 7.4 The logarithm function 7.5 Trigonometrical functions Worked examples Main topics/Key terms, notations and formulae Exercises8. Introduction to optimisation 8.1 Profit maximisation 8.2 Critical points 8.3 Optimisation in an interval 8.4 Infinite intervals Worked examples Main topics/Key terms, notations and formulae Exercises9. The derivative in economics--I 9.1 Elasticity of demand 9.2 Profit maximisation again 9.3 Competition versus monopoly Worked examples Main topics/Key terms, notations and formulae Exercises10. The derivative in economics--II 10.1 The efficient small firm 10.2 Startup and breakeven points Worked examples Main topics/Key terms, notations and formulae Exercises11. Partial derivatives 11.1 Functions of several variables 11.2 Partial derivatives 11.3 The chain rule Worked examples Main topics/Key terms, notations and formulae Exercises12. Applications of partial derivatives 12.1 Functions defined implicitly 12.2 The derivative of an implicit function 12.3 Contours and isoquants 12.4 Scale effects and homogeneous functions Worked examples Main topics/Key terms, notations and formulae Exercises13. Optimisation in two variables 13.1 Profit maximisation again 13.2 How prices are related to quantities 13.3 Critical points 13.4 Maxima, minima, and saddle points 13.5 Classification of critical points - introduction 13.6 The classification of critical points in general Worked examples Main topics/Key terms, notations and formulae Exercises14. Vectors, preferences and convexity 14.1 Vectors and bundles 14.2 Prices and budgets 14.3 Preferences, utility, and indifference curves 14.4 Linear and convex combinations 14.5 Choosing optimal bundles Worked examples Main topics/Key terms, notations and formulae Exercises15. Matrix algebra 15.1 What is a matrix 16. Linear equations--I 17. Linear equations--II 18. Inverse matrices 19. The input-output model 20. Determinants 21. Constrained optimisation 22. Lagrangeans and the consumer 23. Second-order recurrence equations 24. Macroeconomic applications 25. Areas and integrals 26. Techniques of integration 27. First-order differential equations 28. Second-order differential equations Solutions to selected exercises Index
