

<<偏微分方程>>

图书基本信息

书名：<<偏微分方程>>

13位ISBN编号：9787506240710

10位ISBN编号：7506240718

出版时间：1999-3

出版时间：北京世图

作者：J.Rauch

页数：263

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

## <<偏微分方程>>

### 内容概要

This book is based on a course I have given five times at the University of Michigan, beginning in 1973. The aim is to present an introduction to a sampling of ideas, phenomena, and methods from the subject of partial differential equations that can be presented in one semester and requires no previous knowledge of differential equations. The problems, with hints and discussion, form an important and integral part of the course. In our department, students with a variety of specialties--notably differential geometry, numerical analysis, mathematical physics, complex analysis, physics, and partial differential equations--have a need for such a course.

## 书籍目录

Preface CHAPTER I Power Series Methods 1.1 The Simplest Partial Differential Equation 1.2 The Initial Value Problem for Ordinary Differential Equations 1.3 Power Series and the Initial Value Problem for Partial Differential Equations 1.4 The Fully Nonlinear Cauchy-Kowaleskaya Theorem 1.5 Cauchy-Kowaleskaya with General Initial Surfaces 1.6 The Symbol or a Differential Operator 1.7 Holmgren's Uniqueness Theorem 1.8 Fritz John's Global Holmgren Theorem 1.9 Characteristics and Singular Solutions CHAPTER 2 Some Harmonic Analysis 2.1 The Schwartz Space  $(\mathbb{R}^d)$  2.2 The Fourier Transform on  $(\mathbb{R}^d)$  2.3 The Fourier Transform on  $L_p(\mathbb{R}^d)$ : 1 p 2 2.4 Tempered Distributions 2.5 Convolution in  $(\mathbb{R}^d)$  and  $(\mathbb{R}^d)$  2.6  $L_2$  Derivatives and Sobolev Spaces CHAPTER 3 Solution of Initial Value Problems by Fourier Synthesis 3.1 Introduction 3.2 Schrodinger's Equation 3.3 Solutions of Schrodinger's Equation with Data in  $(\mathbb{R}^d)$  3.4 Generalized Solutions of Schrodinger's Equation 3.5 Alternate Characterizations of the Generalized Solution 3.6 Fourier Synthesis for the Heat Equation 3.7 Fourier Synthesis for the Wave Equation 3.8 Fourier Synthesis for the Cauchy-Riemann Operator 3.9 The Sideways Heat Equation and Null Solutions 3.10 The Hadamard-Petrowsky Dichotomy 3.11 Inhomogeneous Equation, Duhamels Principle CHAPTER 4 Propagators and  $x$ -Space Mehods 4.1 Introduction 4.2 Solution Formulas in  $x$  Space 4.3 Application of the Heat Propagator 4.4 Application of the Schrodinger Propagator 4.5 The Wave Equation Propagator for  $d=1$  4.6 Rotation-Invariant Smooth Solutions of  $1+3u=0$  4.7 The Wave Equation Propagator for  $d=3$  4.8 The Method of Descent 4.9 Radiation Problems CHAPTER 5 The Dirichlet Problem APPENDIS A Crash Course in Distribution Theory References Index
