

图书基本信息

书名：<<经典力学和天体力学中的数学论题 第2版>>

13位ISBN编号：9787506247092

10位ISBN编号：7506247097

出版时间：2000-6

出版公司：世界图书出版公司

作者：V.I.Arnold

页数：291

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

## 内容概要

This work describes the fundamental principles, problems, and methods of classical mechanics focussing on its mathematical aspects. The authors have striven to give an exposition stressing the working apparatus of classical mechanics, rather than its physical foundations or applications. This apparatus is basically contained in Chapters 1, 3, 4 and 5. Chapter 1 is devoted to the fundamental mathematical models which are usually employed to describe the motion of real mechanical systems. Special consideration is given to the study of motion under constraints, and also to problems concerned with the realization of constraints in dynamics. This work describes the fundamental principles, problems, and methods of classical mechanics focussing on its mathematical aspects. The authors have striven to give an exposition stressing the working apparatus of classical mechanics, rather than its physical foundations or applications. This apparatus is basically contained in Chapters 1, 3, 4 and 5. Chapter 1 is devoted to the fundamental mathematical models which are usually employed to describe the motion of real mechanical systems. Special consideration is given to the study of motion under constraints, and also to problems concerned with the realization of constraints in dynamics.

书籍目录

Chapter 1. Basic Principles of Classical Mechanics 1. Newtonian Mechanics 1.1. Space, Time, Motion  
 1.2. The Newton-Laplace Principle of Determinacy 1.3. The Principle of Relativity 1.4. Basic  
 Dynamical Quantities. Conservation Laws 2. Lagrangian Mechanics 2.1. Preliminary Remarks 2.2.  
 Variations and Extremals 2.3. Lagrange's Equations 2.4. Poincare's Equations 2.5. Constrained  
 Motion 3. Hamiltonian Mechanics 3.1. Symplectic Structures and Hamilton's Equations 3.2.  
 Generating Functions 3.3. Symplectic Structure of the Cotangent Bundle 3.4. The Problem of n Point  
 Vortices 3.5. The Action Functional in Phase Space 3.6. Integral Invariants 3.7. Applications to the  
 Dynamics of Ideal Fluids 3.8. Principle of Stationary Isoenergetic Action 4. Vakonomic Mechanics 4.1.  
 Lagrange's Problem 4.2. Vakonomic Mechanics .....Chapter 2. The n-Body ProblemChapter 3.  
 Symmetry Groups and Reduction Lowering the OrderChapter 4. Integrable Systems and Integration  
 MethodsChapter 5. Perturbation Theory for Integrable SystemsChapter 6. Nonintegrable SystemsChapter 7.  
 Theory of Small OscillationsComments on the BibliographyRecommended ReadingBibliographyIndex
