<<黎曼流形>>

内容概要

This book is designed as a textbook for a one-quarter or one-semester graduate course on Riemannian geometry, for students who are familiar with topological and differentiable manifolds. It focuses on developing an intimate acquaintance with the geometric meaning of curvature. In so doing, it introduces and demonstrates the uses of all the main technical tools needed for a careful study of Riemannian manifolds.

书籍目录

Preface 1 What Is Curvature? The Euclidean Plane Surfaces in Space Curvature in Higher Dimensions 2
Review of Tensors, Manifolds, and Vector Bundles Tensors on a Vector Space Manifolds Vector
Bundles Tensor Bundles and Tensor Fields 3 Definitions and Examples of Riemannian Metrics Riemannian
Metrics Elementary Constructions Associated with Riemannian Metrics Generalizations of Riemannian
Metrics The Model Spaces of Riemannian Geometry Problems 4 Connections The Problem of
Differentiating Vector Fields Connections Vector Fields Along Curves5 Riemannian Geodesics6
Geodesis and Distance7 Curvature8 Riemannian Submanifolds9 The Gauss-Bonnet Theorem10 Jacobi Fields11
Cuvature and TopologyReferencesIndex
