

<<高能物理学导论>>

图书基本信息

书名：<<高能物理学导论>>

13位ISBN编号：9787506265577

10位ISBN编号：7506265575

出版时间：2003-11

出版时间：世界图书出版公司(此信息作废)

作者：D.H.Perskins

页数：426

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<高能物理学导论>>

内容概要

This highly regarded text provides an up-to-date and comprehensive introduction to modern particle physics. Extensively rewritten and updated, this fourth edition includes all the recent developments in elementary particle physics, as well as its connections with cosmology and astrophysics. As in previous editions, the balance between experiment and theory is continually emphasized. The stress is on the phenomenological approach and basic theoretical concepts rather than rigorous mathematical detail. Short descriptions are given of some of the key experiments in the field, and how they have influenced our thinking. Although most of the material is presented in the context of the Standard Model of quarks and leptons, the shortcomings of this model and new physics beyond its compass (such as super symmetry, neutrino mass and oscillations, GUTs and superstrings) are also discussed. The text includes many problems and a detailed and annotated further reading list. This is a text suitable for final-year physics undergraduates and graduate students studying experimental or theoretical particle physics.
