

<<计算分子生物学导论>>

图书基本信息

书名：<<计算分子生物学导论>>

13位ISBN编号：9787506265744

10位ISBN编号：7506265745

出版时间：2003-10

出版时间：世界图书出版公司北京公司

作者：J.Setubal

页数：296

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<计算分子生物学导论>>

内容概要

Ever since the structure of DNA was unraveled in 1953, molecular biology has witnessed tremendous advances. With the increase in our ability to manipulate biomolecular sequences, a huge amount of data has been and is being generated. The need to process the information that is pouring from laboratories all over the world, so that it can be of use to further scientific advance, has created entirely new problems that are interdisciplinary in nature. Scientists from the biological sciences are the creators and ultimate users of this data. However, due to sheer size and complexity, between creation and use the help of many other disciplines is required, in particular those from the mathematical and computing sciences. This need has created a new field, which goes by the general name of computational molecular biology.

<<计算分子生物学导论>>

书籍目录

Preface Book Overview Exercises Errors Acknowledgments
 1 Basic Concepts of Molecular Biology 1.1 Life 1.2 Proteins 1.3 Nucleic Acids 1.3.1 DNA 1.3.2 RNA 1.4 The Mechanisms of Molecular Genetics 1.4.1 Genes and the Genetic Code 1.4.2 Transcription, Translation, and Protein Synthesis 1.4.3 Junk DNA and Reading Frames 1.4.4 Chromosomes 1.4.5 Is the Genome like a Computer Program? 1.5 How the Genome Is Studied 1.5.1 Maps and Sequences 1.5.2 Specific Techniques 1.6 The Human Genome Project 1.7 Sequence Databases Exercises Bibliographic Notes
 2 Strings, Graphs, and Algorithms 2.1 Strings 2.2 Graphs 2.3 Algorithms Exercises Bibliographic Notes
 Sequence Comparison and Database Search 3.1 Biological Background 3.2 Comparing Two Sequences 3.2.1 Global Comparison-The Basic Algorithm 3.2.2 Local Comparison 3.2.3 Semiglobal Comparison 3.3 Extensions to the Basic Algorithms 3.3.1 Saving Space 3.3.2 General Gap Penalty Functions 3.3.3 Affine Gap Penalty Functions 3.3.4 Comparing Similar Sequences 3.4 Comparing Multiple Sequences 3.4.1 The SP Measure 3.4.2 Star Alignments 3.4.3 Tree Alignments 3.5 Database Search 3.5.1 PAM Matrices 3.5.2 BLAST 3.5.3 FAST 3.6 Other Issues 3.6.1 Similarity and Distance 3.6.2 Parameter Choice in Sequence Comparison 3.6.3 String Matching and Exact Sequence Comparison Summary Exercises Bibliographic Notes
 Fragment Assembly of DNA 4.1 Biological Background 4.1.1 The Ideal Case 4.1.2 Complications 4.1.3 Alternative Methods for DNA Sequencing 4.2 Models 4.2.1 Shortest Common Superstring 4.2.2 Reconstruction 4.2.3 Multicontig 4.3 Algorithms 4.3.1 Representing Overlaps 4.3.2 Paths Originating Superstrings 4.3.3 Shortest Superstrings as Paths 4.3.4 The Greedy Algorithm 4.3.5 Acyclic Subgraphs 4.4 Heuristics 4.4.1 Finding Overlaps 5 Physical Mapping of DNA 6 Phylogenetic Trees 7 Genome Rearrangements 8 Molecular Structure Prediction 9 Epilogue: Computing with DNA Answers to Selected References Index
