<<单复变函数 第2版>>

内容概要

This book is intended as a textbook for a first course in the theory of functions of one complex variable for students who are mathematically mature enough to understand and execute arguments. The actual pre-requisites for reading this book are quite minimal; not much more than a stiff course in basic calculus and a few facts about partial derivatives. The topics from advanced calculus that are used (e.g., Leibniz's rule for differentiating under the integral sign) are proved in detail.

<<单复变函数 第2版>>

书籍目录

Preface . The Complex Number System 1. The real numbers 2. The field of complex numbers 3. The complex plane 4. Polar representation and roots of complex numbers 5. Lines and half planes in the complex plane 6. The extended plane and its spherical representation . Metric Spaces and the Topology of \mathbb{C} 1. Definition and examples of metric spaces 2. Connectedness 3. Sequences and completeness 4. Compactness 5. Continuity 6. Uniform convergence . Elementary Properties and Examples of Analytic Functions 1. Power series 2. Analytic functions 3. Analytic functions as mappings , M6bius transformations . Complex Integration 1.Riemann-Stieltjes integrals 2.Power series representation of analytic functions 3.Zeros of an analytic function 4.The index of a closed curve 5.Cauchy's Theorem and Integral Formula 6.The homotopic version of Cauchy's Therorem and simple connectivity 7.Counting zeros;the Open Mapping Theorem 8.Goursat's Theorem .Singularities 1.Classification of singularities 2.Residues 3.The Argument Principle .Compactness and Convergence in the .Runge's Theorem .Analytic Continuation and Riemann Surfaces .Harmonic Functions .Entire Functions .The Range of an Analytic FunctionAppendix A:Calculus for Complex Complex Valued Functions of and IntervalAppendix B:Suggestions for Further Study and Bibliographical NotesReferencesIndexList of Symbols
