

<<代数拓扑中微分形式>>

图书基本信息

书名：<<代数拓扑中微分形式>>

13位ISBN编号：9787506291903

10位ISBN编号：7506291908

出版时间：2009-3

出版时间：世界图书出版公司北京分公司

作者：Raoul Bott,Loring W. Tu

页数：331

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<代数拓扑中微分形式>>

前言

The guiding principle in this book is to use differential forms as an aid in exploring some of the less digestible aspects of algebraic topology. Accordingly, we move primarily in the realm of smooth manifolds and use the de Rham theory as a prototype of all of cohomology. For applications to homotopy theory we also discuss by way of analogy cohomology with arbitrary coefficients. Although we have in mind an audience with prior exposure to algebraic or differential topology, for the most part a good knowledge of linear algebra, advanced calculus, and point-set topology should suffice. Some acquaintance with manifolds, simplicial complexes, singular homology and cohomology, and homotopy groups is helpful, but not really necessary. Within the text itself we have stated with care the more advanced results that are needed, so that a mathematically mature reader who accepts these background materials on faith should be able to read the entire book with the minimal prerequisites. There are more materials here than can be reasonably covered in a one-semester course. Certain sections may be omitted at first reading without loss of continuity. We have indicated these in the schematic diagram that follows. This book is not intended to be foundational; rather, it is only meant to open some of the doors to the formidable edifice of modern algebraic topology. We offer it in the hope that such an informal account of the subject at a semi-introductory level fills a gap in the literature. It would be impossible to mention all the friends, colleagues, and students whose ideas have contributed to this book. But the senior author would like on this occasion to express his deep gratitude, first of all to his primary topology teachers E. Specker, N.

书籍目录

Introduction CHAPTER De Rham Theory § 1 The de Rham Complex on R The de Rham complex Compact supports § 2 The Mayer-Vietoris Sequence The functor Q The Mayer-Vietoris sequence The functor and the Mayer-Vietoris sequence for compact supports § 3 Orientation and Integration Orientation and the integral of a differential form Stokes' theorem § 4 Poincaré Lemmas The Poincaré lemma for de Rham cohomology The Poincaré lemma for compactly supported cohomology The degree of a proper map § 5 The Mayer-Vietoris Argument Existence of a good cover Finite dimensionality of de Rham cohomology Poincaré duality on an orientable manifold The Künneth formula and the Leray-Hirsch theorem The Poincaré dual of a closed oriented submanifold § 6 The Thom Isomorphism Vector bundles and the reduction of structure groups Operations on vector bundles Compact cohomology of a vector bundle Compact vertical cohomology and integration along the fiber Poincaré duality and the Thom class The global angular form, the Euler class, and the Thom class Relative de Rham theory § 7 The Nonorientable Case The twisted de Rham complex Integration of densities, Poincaré duality, and the Thom isomorphism CHAPTER The Čech—de Rham Complex § 8 The Generalized Mayer-Vietoris Principle Reformulation of the Mayer-Vietoris sequence Generalization to countably many open sets and applications § 9 More Examples and Applications of the Mayer-Vietoris Principle Examples : computing the de Rham cohomology from the combinatorics of a good cover Explicit isomorphisms between the double complex and de Rham and each The tic-tac-toe proof of the Künneth formula § 10 Presheaves and Čech Cohomology Presheaves Čech cohomology § 11 Sphere Bundles Orientability The Euler class of an oriented sphere bundle The global angular form Euler number and the isolated singularities of a section Euler characteristic and the Hopf index theorem § 12 The Thom Isomorphism and Poincaré Duality Revisited The Thom isomorphism Euler class and the zero locus of a section A tic-tac-toe lemma Poincaré duality § 13 Monodromy When is a locally constant presheaf constant? Examples of monodromy CHAPTER Spectral Sequences and Applications § 14 The Spectral Sequence of a Filtered Complex Exact Couples The spectral sequence of a filtered complex The spectral sequence of a double complex The spectral sequence of a fiber bundle Some applications Pfaffian structures The Gysin sequence Leray's construction § 15 Cohomology with Integer Coefficients Singular homology The cone construction The Mayer-Vietoris sequence for singular chains Singular cohomology The homology spectral sequence § 16 The Path Fibration The path fibration The cohomology of the loop space of a sphere § 17 Review of Homotopy Theory Homotopy groups The relative homotopy sequence Some homotopy groups of the spheres Attaching cells Digression on Morse theory The relation between homotopy and homology $\pi_3(S^2)$ and the Hopf invariant § 18 Applications to Homotopy Theory Eilenberg-MacLane spaces The telescoping construction The cohomology of $K(\mathbb{Z}, 3)$ The transgression Basic tricks of the trade Postnikov approximation Computation of $\pi_4(S^3)$ The Whitehead tower Computation of $\pi_5(S^3)$ § 19 Rational Homotopy Theory Minimal models Examples of Minimal Models The main theorem and applications CHAPTER Characteristic Classes § 20 Chern Classes of a Complex Vector Bundle The first Chern class of a complex line bundle The projectivization of a vector bundle Main properties of the Chern classes § 21 The Splitting Principle and Flag Manifolds The splitting principle Proof of the Whitney product formula and the equality of the top Chern class and the Euler class Computation of some Chern classes Flag manifolds § 22 Pontrjagin Classes Conjugate bundle Realization and complexification The Pontrjagin classes of a real vector bundle Application to the embedding of a manifold in a Euclidean space § 23 The Search for the Universal Bundle The Grassmannian Digression on the Poincaré series of a graded algebra The classification of vector bundles The infinite Grassmannian Concluding remarks References List of Notations Index
