章节摘录

Enterprises that see value in Scrum decide to move forward. This chapter presents cases of companies that have moved forward with Scrum. (I have changed the real names of the companies and people involved to fictitious names.) These were courageous enterprises, motivated by insight and need. No enterprise in its right mind would wholeheartedly start using Scrum otherwise. Adopting Scrum in an enterprise is like looking into the abyss, girding oneself for an epic journey, and then making the plunge. What will be discovered and have to be conquered is different in each enterprise; what is common is the courage to start and then persist. Most enterprises that have a compelling need to change take the easy way out—they hire management consultants, buy another business to distract themselves, or reorganize. Scrum is soul-searching by examining failures and dysfunctions, not based on philosophical whim. It is a perilous journey, but probably the only one worth making, because it is the serious business of self-improvement. It is taking a hard look in the mirror every day, every month, and doing something about what one sees. Every enterprise that uses Scrum plots a different course. The people are different. The problems are different. The urgency of the problems is different. The only commonality is Scrum as a tool for change. We'll look at enterprises I've had experience with to illustrate some lessons that can help your enterprise effectively implement Scrum. In all of these examples, the companies saw value first and then plunged into Scrum adoption.

Contoso's ability in the past to rapidly create sophisticated products had made it a marketplace leader. For instance, if your company.
