<<绿色发展>>

内容概要

《绿色发展(英文版)》介绍：China, the largest developing country in the world, is going all out to build itself into a moderately prosperous society during this critical stage of the transformation of economic development mode. Efforts are being made to tackle the environmental problems which result from the country's current economic mode, structure and consumption patterns. We need to try to solve these problems by changing the economic mode, adjusting the economic structure, and improving our consumption patterns. Taking protection of the environment as the basis for state policies, China is working to optimize its economic development, striving for a win-win success in terms of developing the economy and protecting the environment.

书籍目录

Foreword

Chapter 1 New System Development for Environmental Protection

1. The Cotruction of Environmental Protection

Orga have Made Positive

Progress

2. The Cotantly Improved Environmental
Protection Laws and Regulatio

3. The Investment in Environmental Protection
Increased Greatly

4. Improving Environmental Supervision
System

5. Attaching Great Importance to Nuclear Safety
and to the Prevention and

Control of Radioactive
Pollution

Chapter 2 Pollution Control and Prevention

1. Reveing the Momentum of the Coiderable Rise
of the Total Pollutant
Emission

2. The Industrial Structure Upgrade and
Technological Improvement

3. The Supervision Capacity of Environmental
Protection

4. The Environmental Quality

5. The Cociousness of Environmental
Protection

Chapter 3 Ecological Protection and Cotruction

1. Carrying out Biodiveity Protection in an
All-around Way

2. Stably Pushing Forward Ecological Cotruction
Pilots

3. Cotantly Enhancing Management of Nature
Reserve

4. Gradual Promotion on the Regional Ecological
Protection

5. The Soil Environment Protection

Chapter 4 Economy and Environment

1. Green Credit

2. Environmental Pollution Liability
Iurance

3. Green Trade

4. Promoting the Implementation of the Tax
Preferential Policy on

Environmental Protection

5. Green Price

<<绿色发展>>

6. Ecological Competition

7. Emission Trading

8. Pollution Charges

Chapter 5 Environmental Impact Assessment

1. Significant Progress in System

Construction

2. The Participation of Comprehensive

Decision-making

3. Preventing Environmental Pollution at the Source

4. The Promotion of the Team Power and Capability Construction

Chapter 6 Environmental Technology and Industry

1. Vigorously Implementing the Strategy of

Rejuvenating Environmental

Protection through Science and

Technology

2. Implementing the Three Big Basic and

Strategic Environmental Protection

Projects

3. Guaranteeing the Role of Science and

Technology and Actively Supporting

National Major Strategic Disposition

and Activities

4. Increasing Science and Technology Cooperation

Capability and Improving

the Environmental Management

Level

5. Responding Scientifically to Environmental

Accidents and Natural

Disaster

Chapter 7 Environmental Education and Public Participation

1. The Publicity of Environmental News
