

<<欧几里得空间的傅立叶分析>>

图书基本信息

书名：<<欧几里得空间的傅立叶分析>>

13位ISBN编号：9787510005329

10位ISBN编号：7510005329

出版时间：2009-8

出版时间：世界图书出版公司

作者：stein

页数：297

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<欧几里得空间的傅立叶分析>>

内容概要

This book is designed to be an introduction to harmonic analysis in Euclidean spaces. The subject has seen a considerable flowering during the past twenty years. We have not tried to cover all phases of this development. Rather, our chief concern was to illustrate various methods used in this aspect of Fourier analysis that exploit the structure of Euclidean spaces. In particular, we try to show the role played by the action of translations, dilations, and rotations. Another concern, not independent of this chief one, is to motivate the study of harmonic analysis on more general spaces having an analogous structure (such as arises in symmetric spaces). It is our feeling that the study of Fourier analysis in that context and, also, in other general settings, is more meaningful once the special Euclidean case is understood.

<<欧几里得空间的傅立叶分析>>

书籍目录

Preface
 CHAPTER The Fourier Transform 1. The basic L^1 theory of the Fourier transform 2. The L^2 theory and the Plancherel theorem 3. The class of tempered distributions 4. Further results
 CHAPTER Boundary Values of Harmonic Functions 1. Basic properties of harmonic functions 2. The characterization of Poisson integrals 3. The Hardy-Littlewood maximal function and nontangential convergence of harmonic functions 4. Subharmonic functions and majorization by harmonic functions 5. Further results
 CHAPTER The Theory of H_p Spaces on Tubes 1. Introductory remarks 2. The H^2 theory 3. Tubes over cones 4. The Paley-Wiener theorem 5. The H_p theory 6. Further results
 CHAPTER Symmetry Properties of the Fourier Transform 1. Decomposition of $L^2(E^2)$ into subspaces invariant under the Fourier transform 2. Spherical harmonics 3. The action of the Fourier transform on the spaces 4. Some applications 5. Further results
 CHAPTER Interpolation of Operators 1. The M. Riesz convexity theorem and interpolation of operators defined on L_p spaces 2. The Marcinkiewicz interpolation theorem 3. $L(p, q)$ spaces 4. Interpolation of analytic families of operators 5. Further results
 CHAPTER Singular Integrals and Systems of Conjugate Harmonic Functions 1. The Hilbert transform 2. Singular integral operators with odd kernels 3. Singular integral operators with even kernels 4. H_p spaces of conjugate harmonic functions 5. Further results
 CHAPTER Multiple Fourier Series 1. Elementary properties 2. The Poisson summation formula 3. Multiplier transformations 4. Summability below the critical index (negative results) 5. Summability below the critical index 6. Further results
 Bibliography
 Index

<<欧几里得空间的傅立叶分析>>

编辑推荐

We require that the readers have mastered the material that is usually covered in a course in the theory of integration and in the theory of functions of a complex variable.
