

<<索伯列夫空间>>

图书基本信息

书名：<<索伯列夫空间>>

13位ISBN编号：9787510005374

10位ISBN编号：751000537X

出版时间：2009-8

出版时间：世界图书出版公司

作者：亚当斯

页数：305

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

前言

This monograph presents an introductory study of the properties of certain Banach spaces of weakly differentiable functions of several real variables that arise in connection with numerous problems in the theory of partial differential equations, approximation theory, and many other areas of pure and applied mathematics. These spaces have become associated with the name of the late Russian mathematician S. L. Sobolev, although their origins predate his major contributions to their development in the late 1930s. Even by 1975 when the first edition of this monograph was published, there was a great deal of material on these spaces and their close relatives, though most of it was available only in research papers published in a wide variety of journals. The monograph was written to fill a perceived need for a single source where graduate students and researchers in a wide variety of disciplines could learn the essential features of Sobolev spaces that they needed for their particular applications. No attempt was made even at that time for complete coverage. To quote from the Preface of the first edition.

内容概要

This monograph presents an introductory study of the properties of certain Banach spaces of weakly differentiable functions of several real variables that arise in connection with numerous problems in the theory of partial differential equations, approximation theory, and many other areas of pure and applied mathematics. These spaces have become associated with the name of the late Russian mathematician S. L. Sobolev, although their origins predate his major contributions to their development in the late 1930s.

书籍目录

Preface List of Spaces and Norms1. PRELIMINARIES Notation Topological Vector Spaces Normed Spaces Spaces of Continuous Functions The Lebesgue Measure in R^n The Lebesgue Integral Distributions and Weak Derivatives2. THE LEBESGUE SPACES $L_p(\cdot)$ Definition and Basic Properties Completeness of $L_p(\cdot)$ Approximation by Continuous Functions Convolutions and Young's Theorem Mollifiers and Approximation by Smooth Functions Precompact Sets in $L_p(\cdot)$ Uniform Convexity The Normed Dual of $L_p(\cdot)$ Mixed-Norm L_p Spaces The Marcinkiewicz Interpolation Theorem.....

编辑推荐

The existing mathematical literature on Sobolev spaces and their generalizations is vast , and it would be neither easy nor particularly desirable to include everything that was known about such spaces between the covers of one book. An attempt has been made in this monograph to present all the core material in sufficient generality to cover most applications , to give the reader an overview of the subject that is difficult to obtain by reading research papers , and finally ...to provide a ready reference for someone requiring a result about Sobolev spaces for use in some application.
