章节摘录

版权页 : So far, these initial psychoanalyses of Beckett's writing in relation to his problematic life have been fruitful in the sense that they have provided some fresh interpretations of Beckett's labyrinthic fiction. Indeed, Beckett's irrational psyche has determined his modes of cognition and expression to a great extent. A normal person, perceiving the world from a reasonable and widely accepted point of view, values the phenomena of the world in a universally shared language and gains pleasure of identification and psychological security from social communication; whereas Beckett, the gloomy and pessimistic writer, tends to observe the universe from a seemingly nihilistic perspective typical of schizophrenics, and sees only what appears chaotic to normal people for want of a usual pattern of perception or a healthy psyche. Escaping from the outside world, Beckett dips deep into the whirls of unconsciousness where such notions as subject, language and structure have little impact and puts in his somewhat meta-fiction those necessary elements of traditional fiction to the point of disruption. With the dissolution of rationality, which Descartes sees as the basis of knowledge, chaos for Beckett becomes the truth of the world so that his novels, appearing all the more nihilistic to traditional readers, become as chaotic as present deconstructive novels. With such an abnormal psyche, Beckett is "damned to [the] fame" of being the first important postmodernist novelist.
