

<<星火英语巅峰训练>>

图书基本信息

书名：<<星火英语巅峰训练>>

13位ISBN编号：9787533744687

10位ISBN编号：7533744683

出版时间：2009-7

出版时间：安徽科学技术出版社

作者：马德高 主编

页数：128

字数：245000

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<星火英语巅峰训练>>

内容概要

第一部分阅读理解考查特点透视、第二部分阅读理解常考题型分析、第三部分阅读理解应试策略指导、第四部分分类基础训练、一时文新闻、二社会生活、三科普应用、四文化教育、五环境地理、第五部分综合模拟强化训练和第六部分答案解析等等。

<<星火英语巅峰训练>>

书籍目录

- 第一部分 阅读理解考查特点透视
- 第二部分 阅读理解常考题型分析
- 第三部分 阅读理解应试策略指导
- 第四部分 分类基础训练
 - 时文新闻
 - 社会生活
 - 科普应用
 - 文化教育
 - 环境地理
- 第五部分 综合模拟强化训练
- 第六部分 真题自测
- 答案详解详析

章节摘录

版权页： Babies born in summer are more likely to become short-sighted in late life, a study has shown. As many as a quarter of all cases of shortsightedness are caused by too great an exposure to sunlight in the first weeks of life, say eye experts. They are advising all parents to put sunglasses on their babies during the first weeks. Scientists had already established that overexposure to sunlight caused short-sightedness in animals. Researchers who compared the months in which babies were born with whether they needed glasses later on say the principle also applies to humans. A study of almost 300 000 young adults - the largest of its kind - showed that those born in June or July had a 25 percent greater chance of becoming severely short-sighted than those born in December or January. Research leader Professor Michael Belkin, of Tel Aviv University, said it was because prolonged illumination (光照) causes the eyeball to lengthen, causing short-sightedness. Hence the more light a newborn is exposed to, the more the eyeball lengthens and the worse the short-sightedness will be. The mechanism which lengthens the eyeball is associated with levels of melatonin, a pigment which protects the skin against harmful rays of the sun. In young babies not enough melatonin is released as protection, meaning they are more vulnerable to sunburn and changes to eyeball shape. Sight expert Professor Daniel O'Leary, of Anglia Ruskin University in Cambridge, said, "At the moment we don't know the precise cause of why light exposure affects sight, but the evidence proves that it is one of the reasons for people becoming short-sighted."
