章节摘录

Given the considerable variations in Britain's weather both regionally and historically, it is no surprise that there is a great deal of "weather talk" among the population. Take the year 2000 for example, which began with the sunniest winter in England and Wales since 1909, followed by the wettest April since 1766, when records began. Parts of Scotland and Northern Ireland then had the driest July since 1929, before October saw rainfall records broken throughout the country. The fall turned out to be the wettest for England and Wales since records began, continuing into the spring of 2001. Historically, there have been many recorded "freak" conditions. For example, on January 21, 1661, Samuel Pepys recorded in his diary: "It is strange what weather we have had all this winter; no cold at all, but the ways are dusty, and the flies ("flies") fly up and down, and rose bushes are full of leaves..." On the other hand, on a few occasions, such as in 1683 and 1771, the River Thames has frozen, providing an unexpected arena for skating and other amusements.
