

<<机械设计>>

图书基本信息

书名：<<机械设计>>

13位ISBN编号：9787562921110

10位ISBN编号：7562921113

出版时间：2004-7

出版时间：武汉工大

作者：杨明忠 编

页数：356

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

## 前言

Machinery Design is an important technological basic course in mechanical engineering education. It aims to develop engineering students competence of machine design that is the primary concern of machinery manufacturing and the key to manufacturing good products. This course is required to provide engineering students——future engineers——with an elementary knowledge of machine design, to teach them the method, procedures and calculation of machine design, to train them in dealing with practical issues such as simplifying configurations of mechanical elements, establishing models of mathematics and physics, selecting materials, processes and heat-treatments, understanding inspection and maintenance of machinery. Machinery Design is a compulsory course for all the engineering students. As teachers of this course, we believe that it is of urgent necessity for us to compile an English textbook of Machinery Design in accordance with the basic teaching requirements for this course set up by National Education Ministry in order to enhance bilingual teaching in Chinas universities of science and technology. Textbooks of Machinery Design popular in American or European universities are, of course, our main source of reference. But they can only serve as reference because the authors of those textbooks have a thinking pattern different from ours and the machinery manufacturing environments of those countries are different from ours, too. We have established three principles for compiling this textbook :

( 1 ) to meet the needs of the Chinese engineering students ; ( 2 ) to take in the essence of the similar textbooks compiled by American and European professors ; ( 3 ) in plain and concise English. Meanwhile, we have not only introduced in it the advanced ideas and methods of machine design, but also refreshed the teaching contents with the focus shifted on developing the students competence of mechanical engineering design. Besides, we have emphasized creative design and the cultivation of the students ability for analysis and synthesis. In a word, our English textbook of Machinery Design is intended to satisfy the teaching requirements for this course, to develop the English competence of engineering students, and to help them to meet the challenge of economic globalization and technical and scientific revolution.

## 内容概要

Machinery Design is an important technological basic course in mechanical engineering education. This English textbook of Machinery Design is written for Chinese students majoring in mechanical engineering in accordance with the basic teaching requirements for this course set up by National Education Ministry and to enhance bilingual teaching in China's universities of science and technology. It is designed to satisfy the teaching requirements for this course, to develop the English competence of the students, and to help them to meet the challenge of economic globalization and technical and scientific revolution. There are 19 chapters in this textbook: Introduction, Principles of Machinery Design, Failure Theories and Material strength, Friction, Wear and Lubrication, Design of Threaded Fasteners and Joints, Design of Keys, Splines and Pins, Design of Riveted, Welded and Bonded Joints, Transmission of Belts, Transmission of Chains, Design of Gears, Design of Worm Gearing, Sliding Bearings, Rolling-Contact Bearings, Couplings and Clutches, Shafts, Springs, Housings and Frames of Machines, Reducer, and Projects of Machinery Design. At the end of each chapter some problems and notes are designed for practice and better understanding. This textbook can be used as textbook for teachers and students of mechanical engineering for the course of Machinery Design, and as reference book for teachers, students and engineers of other relevant engineering areas.

## 书籍目录

PART I FUNDAMENTALS OF MACHINERY DESIGN CHAPTER 1 INTRODUCTION 1.1 THE ROLE OF MACHINERY DESIGN 1.2 MACHINERY AND COMPONENTS 1.3 OVERVIEW OF MACHINERY DESIGN 1.4 A GENERAL PROCEDURE OF MACHINERY DESIGN 1.5 CONTENTS AND TASKS OF THE COURSE Notes CHAPTER 2 PRINCIPLES OF MACHINERY DESIGN 2.1 FUNDAMENTAL REQUIREMENTS FOR MACHINERY DESIGN 2.1.1 Functional Requirements 2.1.2 Economic Requirements 2.1.3 Safety and Environment Requirements 2.1.4 Reliability Requirements 2.1.5 Other Specific Requirements 2.2 FAILURE MODELS OF MECHANICAL COMPONENTS 2.2.1 Fracture Failure 2.2.2 Failure Resulted from Unexpected Deformations 2.2.3 Failure on Surface Damage 2.2.4 Failure Resulted from Abnormal Operational Conditions 2.3 DESIGN REQUIREMENTS FOR MECHANICAL COMPONENTS 2.3.1 Design for Safety 2.3.2 Design for Manufacturability 2.3.3 Design for Costs 2.3.4 Design for Reliability 2.4 GENERAL CRITERIA FOR COMPONENT DESIGN 2.4.1 Strength Criterion 2.4.2 Rigidity Criterion 2.4.3 Wear Criterion 2.4.4 Dynamic Criterion 2.4.5 Reliability Criterion 2.4.6 Safety Factor ( S ) Notes CHAPTER 3 FAILURE THEORIES AND MATERIAL STRENGTHS 3.1 THEORIES OF FAILURE 3.1.1 The Maximum-Normal-Stress Theory ( the first strength theory ) 3.1.2 The Maximum-Normal-Strain Theory ( the second strength theory ) 3.1.3 The Maximum-Shear-Stress Theory ( the third strength theory ) 3.1.4 The Distortion-Energy Theory ( the fourth strength theory ) 3.2 BULK STRENGTHS OF THE MACHINE COMPONENTS 3.2.1 Loads and Stresses 3.2.2 Stress-Strength Design Method 3.2.3 Strength Design under Static Stresses 3.2.4 Strength Design under Varying Stresses 3.3 SURFACE STRENGTHS OF THE MACHINE COMPONENTS 3.3.1 Surface Contact Stresses and Strengths 3.3.2 Surface Extrusion Stresses and Strengths 3.3.3 Surface Wear Strengths Notes CHAPTER 4 FRICTION, WEAR AND LUBRICATION 4.1 FRICTION 4.1.1 Friction Laws 4.1.2 Mechanisms of Friction 4.2 WEAR 4.2.1 The Wear Process 4.2.2 Mechanisms of Wear 4.3 LUBRICATION 4.3.1 Lubrication Theory 4.3.2 Lubricants 4.3.3 The Problem of Lubricant Selection 4.3.4 Basic Types of Lubricant 4.3.5 Selecting the Lubricant Type 4.3.6 Lubricant Selecting for Particular Components 4.3.7 Lubricant Cooling and Corrosion Prevention 4.4 MACHINERY CONDITION MONITORING 4.4.1 Condition Monitoring 4.4.2 Wear Detection and Assessment 4.4.3 Ferrographic Analysis and Its Application Notes PART II DESIGN OF FASTENERS AND JOINTS CHAPTER 5 DESIGN OF THREADED FASTENERS AND JOINTS 5.1 BASIC CONCEPTS 5.2 THREAD STANDARDS AND DEFINITIONS 5.3 SCREW FASTENINGS 5.4 SCREWING-UP TORQUE, EFFICIENCY AND SELF-LOCKING CONDITIONS 5.5 BOLT TIGHTENING AND INITIAL TENSION 5.6 PREVENTING UNINTENTIONAL UNSCREWING OF SCREW JOINTS 5.7 SCREW AND THREAD ELEMENT DESIGN FOR STEADY LOADS 5.8 DESIGN OF SCREW JOINTS SUBJECT TO LOADS IN THE PLANE OF THE JOINT 5.9 DESIGN OF SCREW JOINTS SUBJECT TO THE OVERTURNING MOMENT 5.10 BOLT TENSION WITH EXTERNAL JOINT-SEPARATING FORCE 5.11 STRENGTH CLASSES AND MATERIALS OF THREADED PARTS 5.12 DESIGN AND PROCESSING MEASURES THAT RAISE THE STRENGTH OF SCREWS SUBJECT TO VARIABLE LOAD 5.13 POWER SCREWS Problems Notes CHAPTER 6 DESIGN OF KEYS, SPLINES AND PINS 6.1 KEY JOINTS 6.1.1 Key Joints and Their Application 6.1.2 Strength Calculation of Straight Key Joints 6.2 SPLINE JOINTS 6.2.1 Type and Application of Spline Joints 6.2.2 Strength Calculation of Spline Joints 6.3 PIN JOINTS Problems Notes CHAPTER 7 DESIGN OF RIVETED, WELDED AND BONDED JOINTS 7.1 RIVETED JOINTS 7.1.1 Rivet Joints and Their Application 7.1.2 Types of Rivets Joints 7.1.3 Strength Calculation of Riveted Joints 7.2 WELDED JOINTS 7.2.1 Type of welding and Application 7.2.2 Style of Welded Seam 7.2.3 Strength Calculation of Weld 7.2.4 Welding Materials and Allowable Stresses 7.2.5 Main Factors Affecting Weld Strength and Measures Increasing Strength 7.3 BONDED JOINTS 7.3.1 Characteristic and Application of Bonded Joints 7.3.2 Adhesives 7.3.3 Joints of Bonded Joints Problems Notes PART III DESIGN OF POWER TRANSMISSION SYSTEMS CHAPTER 8 TRANSMISSION OF BELTS 8.1 PRINCIPAL GEOMETRIC RELATIONSHIPS IN BELT DRIVES 8.2 APPLICATIONS AND WORK CHARACTERISTICS OF BELT DRIVES 8.2.1 Applications of Belt

Drives8.2.2 Forces and Stresses in Belts8.2.3 Creep and Speed Rate in Belt Drives8.2.4 Failure and Design Criteria of Belts8. 3 V-BELT DRIVE DESIGN8.3.1 Specification for Standard Series V-Belts8.3.2 Transmitted Power of a Single V-Belt8.3.3 Design Procedure and Factor Choice for V-Belt Drives8.3.4 V-Belt Pulleys8.3. 5 Tensioner of V-Belt DrivesProblemsNotesCHAPTER 9 TRANSMISSION OF CHAINS9.1 CHARACTERISTICS AND APPLICATION OF CHAIN DRIVES9.2 TYPES OF CHAIN DRIVES9.2.1 Roller Chains9.2.2 Silent Chains9.3 MOVING CHARACTERISTICS OF CHAIN DRIVESCHAPTER 10 DESIGN OF GEARSCHAPTER 11 DESIGN OF WORM GEARINGPART DESIGN OF SHAFTS AND ASSOCIATED PARTSCHAPTER 12 SLIDING BEARINGSCHAPTER 13 ROLLING-CONTACT BEARINGSCHAPTER 14 COUPLINGS AND CLUTCHESCHAPTER 15 SHAFTSPART OTHER COMPONENTSCHAPTER 16 SPRINGSCHAPTER 17 HOUSINGS AND FRAMES OF MACHINESPART CASE STUDIES AND PROJECTSCHAPTER 18 REDUCERCHAPTER 19 PROJECTS OF MACHINERY DESIGNREFERENCES
