<<室内设计建筑 15 设计伙伴IA in>>

内容概要

As a science major in university, she proceeded with degree in postgraduate program of interior design and Late'r in architecture. I believe the muttidisciplinary academic backgrounds she has contributed to her insight into a whole. Though it appears that finding a unison voice from various groups of voices is yet incomplete, there definitely are spatial oncept originated from empirical space experience, architectural, elements such as form, mass, and pilate, and thought-out relation estabtlishment of various material usages with cognitive process. As conjuring new terms such as 'Spatial.Graphics', she has exhibits a daring designer who experiments, studies and creates. She appears to step on a phase in development establishing her own designer ego. Through a series of processes, she wilt complete her spatial identity and designing system on a way to international designer as well as on establishing 'Space design leading group' as her personal goal. As we are in tack of Star Designers in South Korea, I truly think she is the one who has every potential to become one.
