

<<电路分析CIRCUIT ANALYSIS>>

图书基本信息

书名：<<电路分析CIRCUIT ANALYSIS>>

13位ISBN编号：9789810240516

10位ISBN编号：9810240511

出版时间：2001-12

出版时间：Aspen Publishers

作者：Kwan, Bing W.

页数：256

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<电路分析CIRCUIT ANALYSIS>>

内容概要

This volume is intended as a textbook for a first course in electrical engineering. It is divided into two parts, for a two-semester coverage. The first part deals with circuit elements, resistive circuits, circuit theorems, circuit topology, and the state-variable method. The presentation of the state-variable method is a special feature. The authors believe that the natural way to analyze RLC circuits is to use the state-variable method rather than second- or high-order ordinary differential equations. By choosing capacitor voltages and inductor currents in an RLC circuit as state variables, the so-called state equations can be systematically obtained through network topology. Of particular interest is the approach employing Thevenin's theorem and Norton's theorem to find state equations without using circuit topology.

<<电路分析CIRCUIT ANALYSIS>>

书籍目录

Preface

Chapter 1 Circuit Elements

1.1 Circuit Quantities

1.1.1 Charge and Current

1.1.2 Energy and Voltage

1.1.3 Power and Passive Sign Convention

1.2 Element Classifications

1.2.1 Passive versus Active Element

1.2.2 Linear versus Nonlinear Element

1.2.3 Resistive versus Energy-Storage Element

1.2.4 Voltage Sources versus Current Sources

1.2.5 Dependent versus Independent Sources

1.3 Resistors and Ohm's Law

1.3.1 Ohm's Law

1.3.2 Symbol and Power Consumption

1.3.3 Special Cases

1.4 Energy-Storage Elements

1.4.1 Capacitors

1.4.2 Inductors

Chapter 2 Resistive Circuits

2.1 Circuit Laws

2.1.1 Kirchhoff's Current Law

2.1.2 Kirchhoff's Voltage Law

2.2 Equivalent Resistors

2.2.1 Equivalence

2.2.2 Resistors in Series

2.2.3 Resistors in Parallel

2.2.4 Equivalent Resistor via Series and Parallel Combinations

2.3 Node-Voltage Method

2.3.1 Circuits with No Voltage Source

2.3.2 Circuits Containing Voltage Sources

2.4 Loop-Current Method

2.4.1 Circuits with No Current Source

2.4.2 Circuits Containing Current Sources

2.5 Operational Amplifiers

2.5.1 The Ideal Op-Amp

2.5.2 The Inverting Op-Amp

2.5.3 The Non-Inverting Op-Amp

2.5.4 The Difference Amplifier

2.5.5 The Summing Amplifier

2.5.6 The Current to Voltage Converter

Chapter 3 Circuit Theorems

3.1 Linearity and Superposition

3.1.1 Linearity

3.1.2 Superposition

3.2 Thevenin's Theorem

3.3 Norton's Theorem

3.4 Maximum Power Transfer

Chapter 4 Network Equations through Topology

4.1 Graph

4.1.1 Tree, Co-Tree, and Links

4.1.2 Cut-Sets and Cut-Set Equations

4.1.3 Fundamental Loops

4.2 General Nodal Analysis

4.3 General Loop Analysis

Chapter 5 State Variable Method for RLC Circuits

5.1 First Order Circuits

5.1.1 RC Circuits

5.1.2 RL Circuits

5.2 Higher Order Circuits

5.2.1 Topological Method

5.2.2 Generalized Thevenin's Approach

Chapter 6 Sinusoidal Steady-State Analysis

Chapter 7 Three-Phase Circuits

Chapter 8 Two-Port Networks

Chapter 9 Fourier Analysis and Frequency Response

Chapter 10 Laplace Transform
